

the top plate and clamp option

If you choose a kit with a top and clamp instead of a cowl you need to remove the chimney pot, feed the liner through the top plate and clamp it with the top clamp. Then re-cement the chimney pot on top to complete the installation

the chimney cowl option

If you choose a kit with a chimney cowl, installation is easier. The flue liner is clamped directly to the bottom of the cowl which sits on top of your existing chimney pot.

flexible flue liner

This drops down from the chimney to meet the stove pipe. Use the nose cone to weight the liner down and clear the chimney ahead of the liner. Ensure that the liner is the correct way up - there are arrows indicating the direction that the smoke should be travelling in.

chimney insulation

For most efficient use you should insulate between the flue liner and chimney stack by filling the space with vermiculite.

adaptor / increaser

The adaptor makes the join between the vitreous pipe and the flue liner

vitreous enamelled pipe

The vitreous enamelled pipe connects directly to your stove then goes through the register plate to connect with the flue liner via the adaptor.

register plate

This plate seals the bottom of the chimney and ensures efficient operation
