Uses of EM radiation

Radio waves - TV and radio broadcasting
 Microwaves - satellite TV, mobile phone communications and in microwave ovens for heating food
 Infra-red - used in heating devices such as heaters and grills
 Visible light - optical fibre communications and photography
 Ultraviolet - used in fluorescent lamps and for detecting forged banknotes
 X-ray - detection of broken bones and fractures
 Gamma - sterilisation of food and medical equipment

Dangers of EM waves

Small amounts of exposure to EM waves is harmless but repeated exposures to large doses of EM radiation can have serious health consequences. In general, the higher the frequency of radiation, the more dangerous it is.

Microwaves can heat the water inside our cells so microwave ovens have a coating to shield microwaves from the user.

Infrared radiation can cause skin burns and skin cancer. Insulating materials are used for protection.

Ultraviolet radiation can cause damage to surface cells and blindness. UV can mutate DNA and cause cancer. Suncream can protect against UV exposure.

Gamma radiation can penetrate cells and mutate DNA, leading to tissue damage or cancer. People who work with gamma radiation will limit the time they are exposed. Sources of gamma rays are kept in a lead lined box.

Questions
