applications that are more widely ranging A few from a very long list would include electrostatic printing rotating machines power transmission apparatus the electromagnetics of biological systems and physical electronics Whether by nature or by design the phenomena of interest are generally electro quasi static or magneto quasistatic in this second branch of electrodynamics It is tempting to say that the two branches of electrodynamics can be distinguished by the frequency range but electron beam and microwave magnetic devices with their respective plasma oscillations and spin waves are examples where the frequencies can be in the GHz range while the fundamental interactions are quasistatic By design so also are those that determine the frequency response of a transistor
