 active research areas in control theory has always been a domain of natural convergence of research interests in applied
 mathematics and control engineering The theory has developed from the early phase of its history when the basic tool was
 essentially only the Lyapunov second method to the present day where the mathematics ranges from differential geometry
 calculus of variations ordinary and partial differential equations functional analysis abstract algebra and stochastic processes
 while the applications to advanced engineering design span a wide variety of topics which include nonlinear controllability
 and observability optimal control state estimation stability and stabilization feedback equivalence motion planning
