Make: Technology on Your Time Volume 30 Mark Frauenfelder, 2012-04-18 The first magazine devoted entirely to do it yourself technology projects presents its 30th quarterly edition for people who like to tweak disassemble recreate and invent cool new uses for technology Until recently home automation was an unfulfilled promise systems were gimmicky finicky user hostile or potentially unsecure But today thanks to a new crop of devices and technologies home automation is useful fun and maker friendly Using smartphones wireless networks the internet simple microcontrollers and even gesture recognition DIY style Smart Homes can now do everything promised and more for much less and MAKE shows you how in Volume 30

StarBriefs 2001, 2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on Yet nobody would wonder at someone taking a short walk every day after twenty five years that person would have covered a surprisingly long distance This is exactly the story behind this list which appeared first as a few pages within the directory StarGuides or whatever name it had at that time and as a distinct sister publication since 1990 The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations acronyms contractions and symbols which they might encounter in all aspects of the vast range of their professional activities including traveling Perhaps it is a bit paradoxical but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline they will probably encounter more difficulties when dealing with adjacent fields It is for this purpose that this dictionary might be most often used Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions

Motor Age, 1916 Laser Focus, 1968 *Modern Electrical Equipment for Automobiles* Arthur William Judge, 2012-12-06 The necessity for a reprint of the previous edition of this Manual has afforded an opportunity of bringing the information in certain parts of the book up to date by the addition of a new Chapter 13 which deals with the more important developments that have occurred in the interim This method has been adopted in order to simplify and to expedite the preparation of the present edition As with the other Manuals of the Series the elementary method of treatment of the subject has been retained but where considered necessary some theoretical aspects are discussed The previous edition has been checked and where desirable certain minor alterations and improvements have been made in order to clarify the text

There have been several important developments in electrical components and wiring methods since the last edition the more interesting of which have included the wider use of electronics in the design and construction of certain automobile parts Examples of these are the use of transistors diodes and printed circuits on flat and flexible bases notably for instrument panels while miniaturized versions of printed circuits are finding wider applications in automobile components e g for alternator voltage control units In order to assist the non technical reader for whom these Manuals were originally intended a brief outline of the theory and applications of diodes and transistors has been included to help him to understand the circuits using these modern components

The Street Railway Journal ,1901 *Naval Firepower* Norman Friedman,2013-08-20 For more than half a century the big gun was the arbiter of naval power but it was useless if it could not hit the target fast and hard enough to prevent the enemy doing the same Because the naval gun platform was itself in motion finding a firing solution was a significant problem made all the more difficult when gun sizes increased and fighting ranges lengthened and seemingly minor issues like wind velocity had to be factored in To speed up the process and eliminate human error navies sought a reliable mechanical calculation This heavily illustrated book outlines for the first time in layman s terms the complex subject of fire control as it dominated battleship and cruiser design from before World War I to the end of the dreadnought era Covering the directors range finders and electro mechanical computers invented to solve the problems America s leading naval analyst explains not only how the technology shaped and was shaped by the tactics involved but analyses their effectiveness in battle His examination of the controversy surrounding Jutland and the relative merits of competing fire control systems draws conclusions that will surprise many readers He also reassesses many other major gun actions such as the battles between the Royal Navy and the Bismarck and the US Navy actions in the Solomons and at Surigao Strait All major navies are covered and the story concludes at the end of World War II with the impact of radar This is a book that everyone with a more than passing interest in twentieth century warships will want to read and nobody professionally involved with naval history can afford to miss
