SPC and Continuous Improvement Mal Owen,2013-06-29 There is no doubt that quality has become a major feature in the survival plan of organisations With diminishing markets resulting from improved competitive performance and the associated factor of single sourcing arrangements by the major organisations it is clear that unless there is a commitment to change organisations will lose their competitive edge This will unfortunately mean elimination and the resultant harsh realities that come with it for the employees It has been said on many platforms that unemployment is not inevitable Those organisations which recognise the requirements for survival know that quality and its association with customer satisfaction is now a key issue Survival programmes based on quality improvement require an unrelenting commitment to include everyone from the Managing Director down in an ongoing never ending involvement based on monitoring and improving all our activities These Total Quality Management TOM programmes whatever their specific nature have a common theme of measuring and then improving This text describes the philosophy and techniques of one type of involvement programme Statistical Process Control SPC The material to follow suggests that SPC is a major element of any programme and if properly applied could be a complete programme in itself Measuring and improving means that data must be collected used understood interpreted and analysed and thereby lies the difficulty

Total Quality Measurement in the Oil Industry J.D. Symonds,2012-12-06 1 Oxford and Webster s

dictionaries 2 give trans Atlantic agreement in English with a common definition for Quality as degree of excellence Compared with the many words taken up by other authors definitions this is remarkably brief and no doubt unsatisfactory to many people Yet if degree means a stage in an ascending or descending series in intensity or in amount then measurement is by definition explicitly required if terms such as quality level good quality high quality etc are to have any real meaning Using measurement is inherent in the methods of all the major writers on the achievement of business improvement through quality Results from measurements allow improvement by using tools commonly grouped under the heading Statistical Process Control SPC Results also form part of the judging criteria of Total Quality Management TQM models such as the Malcolm Baldrige National Quality Award in the USA and the more recent European Quality Award Future revisions of the ISO 9000 series of quality management system standards will specifically require measurement of defects However it is not easy for quality professionals or line managers to find examples of what they should measure and how to do it in their own particular functions in their own particular industries case studies always seem to refer to others
