1. What do a light bulb, a toaster, a radio, and a computer all have in common?

They use electricity.

2. Suppose you connect a battery to a small light bulb with a single wire. What do you think will happen? Explain your answer.

The wire doesn't need to be connected on either side.

Gizmo Warm-up: Build a circuit

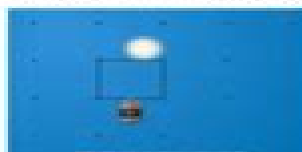

1. Using the **Standard components** in the upper left of the Gizmo, try to get a light bulb to light up. You can drag as many bulbs, wires, batteries, switches and fuses as you like onto the circuit board.

A **circuit** is a path containing easily moveable charges. When the light bulb lights up, negatively-charged particles called **electrons** are flowing through the wire and bulb. This flow is called **current**.

2. Now try to light the bulb with the smallest number of components.

Hand draw in this space or click here to select EDIT to use the drawing tool.

3. Based on what you have seen, what must be true for a circuit to light a bulb?
