

Activity A: Person-to-person transmission	<u>Get the Gizmo ready:</u> - Click Reset (↺). - On the CONTROLS tab under Active Diseases, turn off Foodborne and turn on Person to person. - Set the Number of people to 5.	
--	---	---

Question: What factors affect how quickly a pathogen spreads from person to person?

1. **Predict:** Some pathogens are spread directly from one person to another. This can happen when people come into direct contact or share items, such as drinking glasses. What do you think might affect how quickly a pathogen is spread from person to person?

Answers will vary. [Population density and ease of transmission are the two primary factors affecting the infection rate of a disease.]

2. **Identify:** Select the **SIMULATION** tab on the left and the **TABLE** tab on the right. (You will want the table tab open to answer question C.)
 - A. What does the purple person represent? *An infected person*
 - B. Click **Play**, and observe the simulation for a while. What must happen for the disease to spread from one person to another? *People must come into direct contact*
 - C. How long did it take to **infect** five people? *Answers will vary.*
3. **Experiment:** Click **Reset**. Change the **Number of people** to 15. Click **Play**, and record how long it takes to infect five people. Then repeat the experiment when there are 25 people and 35 people in the room.

Results will vary. Sample data given below.

Number of people in room	Time required to infect five people (hr)
15	5.2 hr
25	4.3 hr
35	3.0 hr

4. **Interpret:** Study the data you collected. What trend do you see in the data, and how would you explain it?

As the number of people in the room increased, the time required to infect five people decreased. This most likely occurred because contact between people became more common as the room grew more crowded, thus it was easier for the pathogen to spread from one person to the next.
