Schoenfeld,2013-04-03 This volume is a result of mathematicians cognitive scientists mathematics educators and classroom teachers combining their efforts to help address issues of importance to classroom instruction in mathematics In so doing the contributors provide a general introduction to fundamental ideas in cognitive science plus an overview of cognitive theory and its direct implications for mathematics education A practical no nonsense attempt to bring recent research within reach for practicing teachers this book also raises many issues for cognitive researchers to consider

Mathematics Education Khoon Yoong Wong,2009 This title provides much food for thought and pointers to meet future challenges in mathematics education not only within Singapore but also in other countries *A Journey in Mathematics Education Research* Erna Yackel,Koen Gravemeijer,Anna Sfard,2010-11-30 Our objective is to publish a book that lays out the theoretical constructs and research methodologies within mathematics education that have been developed by Paul Cobb and explains the process of their development We propose to do so by including papers in which Cobb introduced new theoretical perspectives and methodologies into the literature each preceded by a substantive accompanying introductory paper that explains the motivation rationale for developing the new perspectives and or methodologies and the processes through which they were developed and Cobb s own retrospective comments In this way the book provides the reader with

heretofore unpublished material that lays out in considerable detail the issues and problems that Cobb has confronted in his work that from his viewpoint required theoretical and methodological shifts advances and provides insight into how he has achieved the shifts advances The result will be a volume that in addition to explaining Cobb s contributions to the field of mathematics education also provides the reader with insight into what is involved in developing an aggressive and evolving research program When Cobb confronts problems and issues in his work that cannot be addressed using his existing theories and frameworks he looks to other fields for theoretical inspiration A critical feature of Cobb s work is that in doing so he consciously appropriates and adapts ideas from these other fields to the purpose of supporting processes of learning and teaching mathematics He does not simply accept the goals or motives of those fields As a result Cobb reconceptualizes and reframes issues and concepts so that they result in new ways of investigating exploring and explaining phenomena that he encounters in the practical dimensions of his work which include working in classrooms with teachers and with school systems The effect is that the field of mathematics education is altered Other researchers have found his new ways of looking useful to them And they in turn adapt these ideas for their own use The complexity of many of the ideas that Cobb has introduced into the field of mathematics education can lead to a multiplicity of interpretations by practitioners and by other researchers based on their own experiential backgrounds Therefore by detailing the development of Cobb s work including the tensions involved in coming to grips with and reconciling apparently contrasting perspectives the book will shed additional light on the processes of reconceptualization and thus help the reader to understand the reasons mechanisms and outcomes of researchers constant pursuit of new insights

Cognition and Instruction David Klahr, 2014-01-14 First published in 1987 The author argues that information processing psychology has come to dominate the experimental study of complex human behaviour Such rapid success suggests that the approach will have as much of an impact on psychology in the field as it has had on psychology in the laboratory The chapters in this volume indicate the extent to which this potential has already begun to be realized The book is divided into four parts The first three parts include sets of research contributions followed by discussions and the fourth part contains three chapters that offer critiques syntheses and evaluations of various aspects of the preceding papers

and measurement and their problem solving ability as well as the nature of assessment and the impact of ICT on the classroom Each chapter provides both an overview of recent research and a detailed analysis of the most important findings The research is carefully related to issues of pupils progress in the subject the differentiation of teaching and the role of gender

Youth Unemployment and the Youth Contract Great Britain: Parliament: House of Commons: Work and Pensions Committee, 2012-09-19 This report comments positively on some aspects of the design of the Youth Contract It builds on the types of interventions which have been shown to have a positive impact increased Jobcentre Plus JCP adviser support work experience placements and apprenticeships It also welcomes the inclusion of a new scheme for 16 17 year olds the large majority of whom do not receive support from JCP as they are ineligible for Jobseekers Allowance JSA The Committee acknowledges that the Government has sensibly focused wage incentives the key new element of the Youth Contract on longer term young unemployed claimants and there is an attempt to achieve sustainable job outcomes by linking wage incentives to the Work Programme payment structure in which providers are financially incentivised to keep participants in work and off benefits in the longer term However the Youth Contract on its own it will not be enough to address the current unacceptably high level of youth unemployment A significant impact can only be made if all the targets are met In particular past experience shows that 160 000 wage incentives is a very ambitious target in the current economic climate And 250 000 additional work experience placements for young people may also be unrealistic
