Reducing Operational Costs in Composites Manufacturing Karen Snyder Travis, 2019-07-10 Reducing Operational Costs in Composites Manufacturing provides organization specific principles for managers working in the composites industry. It utilizes a how to format for reducing operational costs and provides examples for each principle. This is followed by a deeper understanding of why character strengths are important and how to effectively manage employees in section three. Section four helps the new manager to think outside the box by bringing in other managers to evaluate and offer suggestions. Finally, section five teaches the reader how to sustain and continually enhance what they have put in place. Chinese Railways Katrin Luger, 2008-03-14 Although being huge by any measure, Chinese Railways are a bottleneck for economic growth in China. The state-owned enterprise returns a small profit but is severely capacity constrained and burdened with inefficiency. A comprehensive reform and efficiency improvement program needs to be developed in order to enable Chinese Railways to support further GDP growth in China. Application of industrial economics to the case of Chinese Railways suggests that moderate deregulation of e.g. the freight business could make Chinese Railways fit for future growth. Operational improvements need to complement this development, such as a redesign of the schedule or the introduction of value added services in the freight business. Based on interviews with Chinese experts, benchmarking with railways in the US, Germany, Russia, and Japan, as well as broad coverage of Chinese language sources, the book makes detailed recommendations on how to design a comprehensive turnaround program for Chinese Railways.

The Garment Worker, 1916 Energy from the Desert Kosuke Kurokawa, 2014-04-08 The world's deserts are sufficiently large that in theory, covering a fraction of their landmass with PV systems could generate many times the current primary global energy supply. This Energy from the Desert volume examines and evaluates the potential of very large scale photovoltaic power generation. VLS PV systems. Following from the success of the first book on the subject, the authors present practical case studies of both virtual and real projects based on selected regions including the Mediterranean, the Middle East, the Gobi Desert, and Western Australia, and their specific socio-economic dynamics, and argue that VLS PV systems in desert areas will be readily available in the near future. As the essential companion to the previous International Energy Agency (IEA) volume, it reiterates and develops key concepts introduced by the original study and provides firm practical recommendations to achieve long-term targets for policy makers and investors.
