Environmental Chemistry for a Sustainable World Eric Lichtfouse,Jan Schwarzbauer,Didier Robert,2011-11-25 Environmental chemistry is a fast developing science aimed at deciphering fundamental mechanisms ruling the behaviour of pollutants in ecosystems Applying this knowledge to current environmental issues leads to the remediation of environmental media and to new low energy low emission sustainable processes Chapters review analysis and remediation of pollutants such as greenhouse gases chiral pharmaceuticals dyes chlorinated organics

arsenic toxic metals and pathogen in air water plant and soil Several highlights include the overlooked impact of air pollutants from buildings for health risk innovative remediation techniques such as bioreactors for gas treatment electrochemical cleaning of pharmaceuticals sequestration on Fe Mn nodules phytoremediation and photocatalytical inactivation of microbial pathogens This book will be a valuable source of information for engineers and students developing novel applied techniques to monitor and clean pollutants in air wastewater soils and sediments *Functional Polymer Nanocomposites for Wastewater Treatment* Mpitloane Joseph Hato, Suprakas Sinha Ray, 2022-03-01 This book provides an overview of the latest advances in applications of nanocomposites in wastewater treatment This book is dedicated to recent developments in the application of polymer nanocomposites to wastewater treatment Based on their morphology and tailored compositions polymer nanocomposites provide powerful tools for environmental remediation via selective adsorption of contaminants in complex environmental matrices The book reviews recent progress in this field covering various nanocomposite fabrication routes and novel applications for pollutant sensing and detection It includes discussion of different types of nanocomposites based on metal organic frameworks and hydrogels while also covering related topics such as nanocomposite membranes photocatalysts and bio nanocomposites for pollution abatement Ideal for researchers and engineers in the field this collection of contributed chapters offers a timely review of current research in nanomaterials for cost effective pollution control technologies **Environmental Geochemistry** Benedetto DeVivo, Harvey Belkin, Annamaria Lima, 2017-09-18 Environmental Geochemistry Site Characterization Data Analysis and Case Histories Second Edition reviews the role of geochemistry in the environment and details state of the art applications of these principles in the field specifically in pollution and remediation situations Chapters cover both philosophy and procedures as well as applications in an array of issues in environmental geochemistry including health problems related to environment pollution waste disposal and data base management This updated edition also includes illustrations of specific case histories of site characterization and remediation of brownfield sites Covers numerous global case studies allowing readers to see principles in action Explores the environmental impacts on soils water and air in terms of both inorganic and organic geochemistry Written by a well respected author team with over 100 years of experience combined Includes updated content on urban geochemical mapping chemical speciation characterizing a brownfield site and the relationship between heavy metal distributions and cancer mortality *Water and Energy* Gustaf Olsson, 2012-06-19 Water and Energy Threats and Opportunities creates an awareness of the important couplings between water and energy It shows how energy is used in all the various water cycle operations and demonstrates how water is used and misused in all kinds of energy production and generation Population increase climate change and an increasing competition between food and fuel production create enormous pressures on both water and energy availability Since there is no replacement for water water security looks more crucial than energy security This is true not only in developing countries but also in the most advanced countries The western parts of the USA suffer

from water scarcity that provides a real security threat The book does not aim to show how to design or to solve some of the very intricate conflicts between water and energy Instead it systematically lists ideas possibilities and a number of results There are a few more technical chapters that act as entry points to more detailed technical literature Part One of the book describes the water energy nexus the conflicts and competitions and the couplings between water security energy security and food security Part Two captures how climate change population increase and the growing food demand will have major impact on water availability in many countries in the world Part Three describes water for energy and how energy production and conversion depend on water availability As a consequence all planning has to take both water and energy into consideration The environmental including water consequences of oil and coal exploration and refining are huge in North America as well as in the rest of the world Furthermore oil leak accidents have hit America Africa Europe as well as Asia The consequences of hydropower are discussed and the competition between hydropower generation flood control and water storage is illustrated The importance of water for cooling thermal power plants is described as this was so tragically demonstrated at the Fukushima nuclear plants in 2011 Climate change will further emphasize the strong coupling between water availability and the operation of power plants Part Four analyses energy for water how water production and treatment depend on energy The book shows that a lot can be done to improve equipment develop processes and apply advanced monitoring and control to save energy for water operations Significant amounts of energy can be saved by better pumping the reduction of leakages controlled aeration in biological wastewater treatment more efficient biogas production and by improved desalination processes The water energy issue is not only about technology It is our attitudes and our lifestyle that can significantly influence the consumption of both water and energy We all have to be reminded that water is energy and energy is water The book is aimed at various kinds of readers The politician and decision maker providing a holistic view The engineer who wishes to find out about the key issues and to understand the strong driving forces from the increasing population climate change and the food supply in the world The student who wishes to get an overview of future challenges and new possibilities The planner water and energy have to be planned together The designer of a water and wastewater system how does energy come in The operator of a water or a wastewater treatment plant what are the possibilities to make the system more efficient The wastewater treatment manager what are the possibilities to save and recover energy in a wastewater treatment plant The researcher looking for connections between different specialities What kind of cross disciplinary research would be needed The power and energy professional mostly the water issue is forgotten until there is water scarcity The water professional it is not only a matter of operating water systems efficiently Water professionals have to be much more engaged in the water quantity and water quality implications of energy generation It is too late to attack the problems by developing methods for the treatment of contaminated water The water consumption and the water pollution simply have to be closely watched already at the energy production phase About the author Gustaf Olsson Professor Em in
