

## Heparin Drip Calculation Problems

These practice problems for heparin drip calculations will test your ability to calculate:

- new flow rate (mL/hr) based on a PTT
- determining the amount of units needed for a bolus
- **units/hr** to infuse based on the physician's order
- how to convert **units/kg/hr** to determine the amount of Heparin the patient will be receiving based on their weight

### Heparin Drips Calculations: How to Solve

#### Problem 1:

The MD orders your patient to start an IV Heparin drip at 12 units/kg/hr and to administer a loading bolus dose of 60 units/kg IV before initiation of the drip. You're supplied with a Heparin bag that reads 25,000 units/250 mL. The patient weighs 189 lbs. What is the flow rate you will set the IV pump at (mL/hr)?

First, determine what you are solving for: **flow rate (mL/hr)**

Second, pick out the correct information you need to solve your problem (watch out for numbers that are distractors). Here is the information you need to solve this problem:

- MD's order: **12 units/kg/hr**
- The bag of Heparin you will be using: **25,000 units/250 mL**
- Patient's weight: **189 lbs**

Now, solve:

$$\frac{189 \text{ lbs}}{1} \times \frac{1 \text{ kg}}{2.2 \text{ lbs}} \times \frac{12 \text{ units/hr}}{1 \text{ kg}} \times \frac{250 \text{ mL}}{25,000 \text{ units}} = \frac{567,000}{55,000} = 10.309090 = 10.3 \text{ mL/hr}$$

Philips, P.F. d'Arcy, P.D. Meers, 2012-12-06 All too often the fruits of modern medicine are blighted by avoidable infection when patients on whom technical skills have been lavished die or lose a benefit they might otherwise have enjoyed Although such a loss is expensive both in terms of human tragedy and of wasted time and resources scant attention is paid to its prevention compared with that which goes into the development and use of the advanced techniques which so often bring infections in their train The intravascular route for biochemical pharmacological nutritional and other physiological support and monitoring necessary to patients undergoing many of the demanding modern medical procedures opens a channel through which infection all too easily finds a way When it does it may be unsuspected and undetected until too late by those whose attention is fixed on the end they seek while forgetting that the means they use can produce preventable disease The largest medical use of the intravascular route is for intravenous therapy Little service is paid to the idea that this carries a significant morbidity and mortality but surprisingly little has been done to measure its incidence or design measures to avoid it In the early 1970s the medical and pharmaceutical professions and the lay public were startled by the realization of the microbiological threat to patients infused with products which had been subject to manufacturing error in their design or production **The Ultimate Pharmacy Calculations Guide** Pharmacy CPA, 2014-05-28 This book has been created for students wanting to take pharmacy registration assessment exams and become a licensed pharmacist Calculations are often considered as the
