Trauma Informatics Kimball I. Maull, Jeffrey S. Augenstein, 1998-03-16 Information and the technology to rapidly transmit analyze document and disperse this information are increasing arithmetically if not logarithmically Arguably no discipline better exemplifies this trend than medicine It can be further argued that care of the trauma patient is one of the better examples of informatics and the potential benefit to the health professionals who care for these patients Maull and Augenstein have provided us with a primer on informatics and its use in trauma care The subject matter is timely and covers the gamut of trauma care from prehospital to rehabilitation Who will benefit from trauma informatics A simple answer would be anyone who takes care of trauma patients From a broader perspective however at least three examples illustrate how trauma informatics can be used today to exert a positive effect on patient outcome The first example is care of combat casualties including battlefield resuscitation evacuation acute care and ultimate return to the continental United States Current technology is such that via global positioning satellite a corpsman could transmit to a remote area the vital signs and pertinent physical findings of a combat casualty Furthermore the location of the corpsman and the casualty would be precisely known and consultation and destination disposition would be possible The injured person when admitted

to a combat support hospital could be continuously monitored and additional remote consultation obtained 2018 Joint Trauma System (JTS) Clinical Practice Guidelines (CPGs) & DOD TRAUMA REGISTRY DATA DICTIONARY For Military and Civilian Health Care Practitioners ,2018-10-09 Almost 1 000 total pages see index at beginning of publications for a complete list of included CPGs Each CPG includes a section on the following 1 GOAL 2 BACKGROUND 3 EVALUATION 4 TREATMENT 5 PERFORMANCE IMPROVEMENT PI MONITORING 6 SYSTEM REPORTING reduced burn morbidity and mortality near elimination of extremity compartment syndrome better patient care documentation and improved communication across the spectrum of care between geographically dispersed facilities CPGs are evidence based and developed with experts in the military and civilian communities deployed clinicians Service trauma surgical consultants JTS leadership and formerly deployed Trauma Directors and Coordinators JTS has a formalized process for developing reviewing updating and approving CPGs The guidelines are developed and implemented by clinical subject matter experts in response to needs identified in the military area of responsibility CPGs were developed originally for U S Central Command However collaborative efforts are ongoing with the other Combatant Commands to customize CPGs to their COCOMs INTRODUCTION TO THE JOINT TRAUMA SYSTEM JTS The Joint Trauma System JTS is the Department of Defense DoD authority for the military s trauma care system The vision of the Joint Trauma System is that every Soldier Sailor Marine and Airman injured on the battlefield will have the optimum chance for survival and maximum potential for functional recovery To achieve this vision in 2006 the JTS implemented programs for data driven trauma system development and improvement in addition to the collection of trauma data As part of its data collection efforts the JTS maintains a registry of trauma patients who received care at medical treatment facilities MTFs Since 2007 this registry known as the DoD Trauma Registry DoDTR has documented demographic injury treatment and outcomes data for all trauma patients admitted to any DoD MTF regardless of whether the injury occurred during on going military operations and is the largest military trauma data source in the world Development of the DoDTR began during the early years of the Global War on Terror GWOt when the need to systematically improve trauma care for combat wounded resulted in the impromptu creation of a demonstration registry known then as the Combat Trauma Registry CTR The CTR was constructed by the Center for AMEDD Strategic Studies CASS trauma related information was initially abstracted into it from paper medical records received from trauma nurse coordinators TNCs at Landstuhl Regional Medical Center LRMC in Germany Shortly after the demonstration program started the Army Surgeon General approved its transition to an operational mode leading to the formation of the Joint Theater Trauma System JTTS and eventually the Joint Trauma System JTS **Emergency and Trauma Care for Nurses and Paramedics - eBook** Kate Curtis,Clair Ramsden,Ramon Z.
