28. Uniform Circular Motion: Centrifugal Acceleration

Directions: Complete the assignments on this page and download it to your phone and print it out for the activity session.

Background: acceleration, centripetal acceleration, centrifugal force, Newton's third law, Newton's universal law of gravitation, orbital velocity

Pre-Module Knowledge Questions (Use these BEFORE watching Lecture.)

1. Is there a difference in your intuition for being on a rotating ride versus standing on the ground versus rotating with it? For example, if you are on a merry-go-round, the ground is stationary. What are the things around you? How does the rotating feel to you?
2. Do you think the rotating merry-go-round is affected by gravity? Explain.

Gravity should be somewhat greater (because of the rotation & acceleration being felt) go on

Newton Works up

First, Newton Circular Motion. Newton shows a ball on a string that is rotating around in a circle at a certain rate. This point calculates the centripetal force for a string pointed at a certain time in a circular system.

Calculate the radius in ft, and then use the formula for the velocity for 1.0 sec.

1. Calculate the radius position (m). (Show the calculation of the circle's radius.)

10.00 m

2. Calculate the ω and Newton's F_{cent} (N). (What should the centripetal force be? What is the ball's position then?)

10.00 m

3. Calculate the ω (Newton's 2nd Law) and the velocity (from the angular position). The thing here is the magnitude, this is tangential, and this is tangential to the point is **centrifugal**.

- a. Calculate the magnitude of the velocity change over time?
