Global warming is one of the important environmental problems whose dangerous effects are increasing gradually. The study reported herein aimed to reveal student teachers' conceptions about global warming and the effect of biology teacher education program on their awareness of this environmental issue. An open-ended questionnaire was used to collect the study's data. Participants were 32 first and 37 fifth year biology student teachers. The results showed that both groups had some confusions and concerns about global warming. All of the student teachers were under the impression that ozone layer depletion was the main cause of global warming and they assumed that greenhouse effect was completely an anthropogenic phenomenon rather than a naturally occurring process. In addition, the pre-service education did not seem to have an important effect on student teachers' awareness of global warming. Discussion of the findings and suggestions for teacher education and future research are included at the end of the paper.

Key words: Global warming, green house effect, ozone layer, biology student teachers.

INTRODUCTION

Global warming is one of the most important as well as complex environmental problems that have been receiving considerable attention from media, public focus as well as from scientists and policy makers worldwide for the last two decades. Simply put, global warming is an artificial increase in the temperature of the earth due to the intensified greenhouse effect occurring as a result of greenhouse gases (mainly carbon dioxide, methane, nitrous oxide, chlorofluorocarbons and ozone) produced from human activities, such as, burning of coal, oil, and natural gas, deforestation and various agricultural and industrial practices (Gül et al., 2009; GCRIO, 2011).

Earth has a blanket of natural green house gases allowing sunlight to filter through while trapping heat. This phenomenon is known as the green house effect and it is

the key factor in earth's ability to maintain a temperature that sustains life. Although the greenhouse gases are effective in warming the earth, too many greenhouse gases increase global temperature. An increase in the human produced green house gases results in intensified greenhouse effect leading to global warming. Such increase in the green house gases also contributes to depletion or even disappearing of the ozone layer over some parts of the world. The ozone layer absorbs the ultraviolet radiation from sun, which has the capacity to seriously harm planet earth, including its life forms.

Although, the problem of global warming and the related issues such as green house effect and ozone layer depletion are frequently addressed in the printed media and television programs and students are taught these issues in their schools and at related college education courses, there are still some misconceptions, misunderstandings and confusions about the issues as identified by many research studies (Dove, 1996; Meadows and Wiesenmayer, 1999; Grove and Pugh,
