Artificial Life VII Mark A. Bedau,John S. McCaskill,Norman H. Packard,Steen Rasmussen,2000-08-01 The term artificial life describes research into synthetic systems that possess some of the essential properties of life This interdisciplinary field includes biologists computer scientists physicists chemists geneticists and others Artificial life may be viewed as an attempt to understand high level behavior from low level rules for example how the simple interactions between ants and their environment lead to complex trail following behavior An understanding of such relationships in particular systems can suggest novel solutions to complex real world problems such as disease prevention stock market prediction and data mining on the Internet Since their inception in 1987 the Artificial Life meetings have grown from small workshops to truly international conferences reflecting the field's increasing appeal to researchers in all areas of science A Guide to Undergraduate Science Course and Laboratory Improvements National Science Foundation (U.S.). Directorate for Science Education,1979 Librarian's Guide to Online Searching Christopher C. Brown,2021-06-18 Updates the premier textbook for students and librarians needing to know the landscape of current databases and how to search them Librarians need to know of existing databases and they must be able to teach search capabilities and strategies to library users This practical guide introduces librarians to a broad spectrum of fee based and freely available databases and explains how to teach them The updated 6th edition of this well regarded text covers new databases on the market as well as updates to older databases It also explains underlying information structures and demonstrates how to search most effectively It introduces readers to several recent changes such as the move away from metadata based indexing to full text indexing by vendors covering newspaper content Business databases receive greater emphasis As in the previous editions this book takes a real world approach covering topics from basic and advanced search tools to online subject databases Each chapter includes a thorough discussion a recap concrete examples exercises and points to consider making it an ideal text for courses in database searching as well as a trustworthy professional resource COVID Ecology and Evolution: Systemic Biosocial Dynamics Matteo Convertino,Salvatore Flavio Pileggi,2023-05-23 With the world in a state of emergency due to the Coronavirus

pandemic almost the entire scientific community and all governmental intergovernmental agencies are focused on defining the most effective disease control and forecasting. However, is disease control the only or most crucial element to consider? In this Research Topic we intend to highlight crucially important topics about Coronavirus related to its environmental dependencies, biological diversity and stability and socio-economic outcomes, considering also information modeling and technological aspects of the pandemic. The objective of the Research Topic is to bring together spatio-temporal biological, ecological, environmental and social aspects of Coronavirus to better understand its dynamics, shifts, systemic impacts on health and socio-economic effects. Studies via models that link Coronavirus to other viruses are welcome in order to properly characterize the biology, ecology and environmental niche or universality of Coronavirus dynamics. We also seek prospective studies that investigate potential future spillovers of Coronavirus-like viruses by indicating risk hotspots in relation to socio-environmental determinants. Other issues focused on public health and medical aspects are welcome; however, these studies need to explicitly address the virus connection with the environment in order to gain insight into its ecology and evolution. Studies addressing data and modeling challenges as well as different model approaches from machine learning to phenomenological and process-based models have a lot of interest. Lastly, we highly encourage studies that quantitatively explore the coupled evolution of population perceptions and the associated infodemic, for instance, inferred from social media behavior and systemic health outcomes.

Dynamical Systems José A. Tenreiro Machado, 2018-10-09 Printed Edition of the Special Issue Published in Entropy The Story of Evolution Benjamin Charles Gruenberg, 1929 **Resources in Education**, 1997 **The Routledge Handbook of Evolutionary Approaches to Religion** Yair Lior, Justin Lane, 2022-11-30 The past two decades have seen a growing interest in evolutionary and scientific approaches to religion. The Routledge Handbook of Evolutionary Approaches to Religion is an outstanding reference source to the key topics, problems and debates in this exciting and emerging field. Comprising over thirty chapters by a team of international contributors, the handbook pulls together scholarship in the following areas: evolutionary psychology and the cognitive science of religion; CSR; cultural evolution; the complementarity of evolutionary psychology, cognitive science and cultural evolution. Within these sections, central issues, debates and problems are examined, including: Cliodynamics; cultural group selection; costly signaling; dual inheritance theory; literacy; transmitting narratives; prosociality; supernatural punishment; cognition and ritual; meme theory; fusion theory; sexual selection; agency detection; evoked culture; social brain hypothesis; theory of mind; developmental psychology; emergence theory; social learning; cultural cybernetics; cultural epidemiology; evolutionary and cultural psychology; memetics; by-product and adaptationist theories of religion; systems and information theory; and computer modeling. This Handbook is essential reading for students and researchers in religious studies and anthropology. It will also be very useful to those in related fields such as psychology, sociology of religion, cognitive biology and evolutionary biology.

Cultural Evolution Alex Mesoudi, 2011-09 Charles Darwin changed the course of scientific thinking by showing how evolution accounts for the stunning diversity and biological complexity of life on earth Recently there has also been increased interest in the social sciences in how Darwinian theory can explain human culture Covering a wide range of topics including fads public policy the spread of religion and herd behavior in markets Alex Mesoudi shows that human culture is itself an evolutionary process that exhibits the key Darwinian mechanisms of variation competition and inheritance This cross disciplinary volume focuses on the ways cultural phenomena can be studied scientifically from theoretical modeling to lab experiments archaeological fieldwork to ethnographic studies and shows how apparently disparate methods can complement one another to the mutual benefit of the various social science disciplines Along the way the book reveals how new insights arise from looking at culture from an evolutionary angle *Cultural Evolution* provides a thought provoking argument that Darwinian evolutionary theory can both unify different branches of inquiry and enhance understanding of human behavior
