## **1 Revision of matter (Grade 9)**

### **1.1 Matter and classification**

- Matter is made up of particles (atoms or molecules) and it is the properties of the atoms or molecules that determine the characteristics and reactivity of that matter.
- The properties of matter include: strength; density; melting and boiling points; whether the material is brittle, malleable or ductile; whether it is magnetic or not; and its electrical and thermal conductivity.
- Elements and compounds are classified as pure because they contain particles that are all the same. Substances can be classified as pure – elements and compounds
  - or mixtures. Pure substances contain particles that are all the same. Elements and compounds can be represented by symbols and formulae. Some of the names, symbols or formulae of a number of common elements and compounds that you should have learnt are the following:
    - Elements: S for sulphur; C for carbon; P for phosphorus (note the spelling); H for hydrogen; O for oxygen; He for helium; N for nitrogen; F for fluorine; Mg for magnesium; Ca for calcium; Zn for zinc.
    - Compounds:  $H_2O$  for water;  $H_2SO_4$  for sulphuric acid; HCl for hydrochloric acid; NaCl for sodium chloride (table salt);  $CaCO_3$  for calcium carbonate;  $KNO_3$  for potassium nitrate;  $Na_3PO_4$  for sodium phosphate.
- You will notice that the naming of compounds follows these rules
  - The metal or hydrogen is always named first, then the non-metal (potassium iodide: KI; hydrogen chloride: HCl (also called hydrochloric acid)).
  - The name of a non-metal ion of an element always ends in -ide (for instance, sodium chloride: NaCl).
  - The name of a non-metal complex ion (more than one element in the ion) usually ends in -ate or -ite (for instance, copper sulphate:  $CuSO_4$ ; potassium sulphite:  $K_2SO_3$ ). An exception to this is hydroxide (for instance, sodium hydroxide: NaOH).
- Mixtures consist of different substances, and can be homogeneous (have the same 'look' throughout) or heterogeneous (you can see the different substances). They can be separated in various ways, for instance filtering, sieving, chromatography, distilling or dissolving one constituent.
- Some of the properties of metals are that they conduct electricity and heat, and they are malleable and ductile.
- Non-metals are non-conductors of electricity and heat. They are gases, liquids or brittle solids, and bond with each other.
- Metalloids are elements on the border between metals and non-metals, and they have both metal and non-metal properties.

Department of Public Instruction,1927 *Research Project Success* Cliodhna McCormac,James Davis,Pagona Papakonstantinou,Neil I Ward,2015-10-20 The undergraduate research project is almost universally treated as the culmination of all previous lecture lab and tutorial work The project allows for the development of individuality and confers ownership of a challenge possessing an originality that goes far beyond the communal legacy presented by age old lab scenarios Central to this is the magical transition of the student from a consumer of knowledge to a producer yet the journey is often both daunting and perplexing when considering where to start and how to reach the destination using the resources provided and in the allotted time There are numerous books within the social sciences which provide students with guidance on how to conduct a successful project but few can be found in relation to the physical sciences This can be ascribed to the fact that the former has a very similar structure and procedural methodology whereas the latter can possess a near fractal differentiation into a myriad of sub disciplines and specialisms thereby preventing the provision of a single expansive catchall text This book adapts some of the components and ethos of the Projects in Controlled Environments PRinCE2 project management approach to physical science projects This is the industry and government standard and was introduced to address the common causes of project failure ie not delivering projects on time within budget within scope or to the right quality It has rapidly emerged as an international standard and most graduates will doubtless encounter it upon moving outside academia and into the wider world It is a concise multilevel resource that provides guidance on the core components common to almost every project within the physical engineering and life sciences problem assessment and contextualisation literature review practices sources and citation data presentation reporting styles data analysis and error etc It standardises the delivery of the material but more importantly links the components together by outlining a coherent procedural road map that can highlight to the student what to do when to do it and how to solve it procedures The content of the book is presented through case studies so as to enhance the relevance of the processes presents examples of good practice and in keeping with the toolbox approach can be readily adapted and applied by the students The book is an accessible reference guide for students written in a light style suitable for dipping in and out of as required and the how to when to what if examples are presented in an often humorous light It includes flow charts to emphasize the project planning dissertation components etc and charts to highlight presentation of data analysis interpretation and error *A Complete Preparation for the MCAT* Aftab S.
