

# Special Right Triangles (Part 2)

100%

Remember not all special right triangles. Every one I think is a different kind of special right triangle.

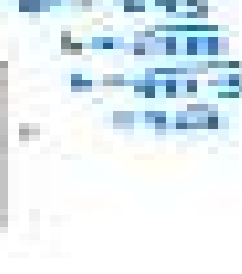

1. Use a meter stick to draw the triangle.
  - a. Place a point C somewhere along the horizontal line.
  - b. Draw a vertical line at C. Measure it 60" up to point A. Connect that point with the horizontal line.
  - c. Label the hypotenuse AC.

2. What angles is made at point A? What special triangle is this?  
 30°, 60°, 90° special right triangle
3. Label the angles. What angles are there? 30° at A, 60° at B, 90° at C. How do you know?  
 30° is opposite the 60° side. 60° is opposite the 30° side. From the smaller angle.
4. How can you tell if you are measuring the angles of your triangle correctly?
5. How do you know if you are measuring the angles of your triangle correctly?

## Table

1. Compare the triangles made by each member of your group. What is the same? What is different?  
 All are 30-60-90 triangles. The angles are different but the hypotenuse is always 2 times the shorter leg.
2. Find the missing side length in each triangle. Label the hypotenuse. Measure the longer leg. What side is the hypotenuse?

Long leg is 2 times longer than shorter leg.
