for Science Education Phyllis Katz, 2017-03-23 This book argues for the essential use of drawing as a tool for science teaching and learning. The authors are working in schools, universities, and continual science learning (CSL) settings around the world. They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking, sometimes direct observation and in other instances their memories. The result is a collection of research and essays that offer theory, techniques, outcomes, and models for the reader. Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms. Secondary students describe their ideas of chemistry and physics. Teacher educators use drawings to consider the progress of their undergraduates' understanding of science teaching and even their moral/ethical responses to teaching about climate change. Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has been a critical tool to medical education and doctor/patient communications. Each chapter contains samples, insights, and where applicable, analysis techniques. The chapters in this book should be helpful to researchers and teachers alike across the teaching and learning continuum. The sections are divided by the kinds of activities for which drawing has historically been used in science education: An instance of observation (Audubon, Linnaeus), A process (how plants grow over time, what happens when chemicals combine), Conceptions of what science is and who does it, Images of identity development in science teaching and learning.

The End of Public Schools David W. Hursh, 2015-10-16 The End of Public Schools analyzes the effect of foundations, corporations, and non-governmental organizations on the rise of neoliberal principles in public education. By first contextualizing the privatization of education within the context of a larger educational crisis and with particular emphasis on the Gates Foundation and influential state and national politicians, it describes how specific policies that limit public control are advanced across all levels. Informed by a thorough understanding of issues such as standardized testing, teacher tenure, and charter schools, David Hursh provides a political and pedagogical critique of the current school reform movement as well as details about the increasing resistance efforts on the part of parents, teachers, and the general public.

Insight Into a Bright Mind Nicole Tetreault, Ph.D., 2021-03-30 Are you bright? Do you know someone who is? Among the bright population, many social, emotional, and intellectual abilities are unrecognized. Bright people are misunderstood and mislabeled as awkward geeks, mad scientists, maladjusted poets, oversensitive artists, hyperactive clowns, or antisocial misfits. Do you want to understand the science behind why intelligent, sensitive, and highly creative brains are simply different? In *Insight into a Bright Mind*, Dr. Nicole Tetreault translates recent groundbreaking research examining the minds of the most highly intelligent, creative, and intense brains and explores new directions for the neurodiverse experiences of humans. You will learn how your brain is as unique as your fingerprint and how your experience is elevated because you are simply hard-wired differently. *Insight into a Bright Mind* is intensely argued in favor of neuroindividuality, superbly researched with the latest scientific data, and deeply invested in engaging with a myriad of bright minds capturing their
