Arabic Theology, Arabic Philosophy Richard M. Frank,2006 In the course of his career Professor Richard M Frank of the Catholic University of America produced a hugely significant corpus of works on the intellectual activity in Classical Islam known as Kalam which he argued should be rendered as speculative theology He also wrote on the Qur an on the Arabic and Syriac philosophical tradition and argued vigorously for a new reading of the famous religious scholar and theologian al Ghazali d 1111 as a devotee of the cosmology of Ibn Sina d 1037 In this volume fourteen scholars many of them contemporaries of Professor Frank engage with his legacy with important and seminal works which take some of his ideas as their points of departure The book is divided into six sections the Qur an Paths to al Ash ari Al Ash ari and the Kalam Christian Falsafa Avicenna and Beyond and Al Ghazali on Causality There are major articles on Qur anic emendations and Arabia and Late Antiquity on the Arabic Plotinian Tradition on Syriac Philosophical Vocabulary and an important reading of the Greek Arabic translation movement in terms of the practical and exact sciences There are seminal studies of atomism with valuable translations of complex theological passages previously untranslated of the Christian philosophy of Yahya ibn Adi of a late Mu tazili argument for the existence of God and a hitherto unedited section on optics by Ibn Mattawayh These are complemented by important close readings of Avicenna s epistemology and his Metaphysics together with a major new survey of the Avicennan tradition in the madrasas of the Islamic East The volume ends with two discussions of the perennial question of al Ghazali s theory of causality In addition the volume contains an autobiographical piece by Professor Frank and a complete bibliography of his published works **Redefining Geometrical Exactness** Henk J.M. Bos,2012-12-06 In his G om trie of 1637 Descartes achieved a monumental innovation of mathematical techniques by introducing what is now called analytic geometry Yet the key question of the book was foundational rather than technical When are geometrical objects known with such clarity and distinctness as befits the exact science of geometry Classically the answer was sought in procedures of geometrical construction in particular by ruler and compass but the introduction of new algebraic techniques made these procedures insufficient In this detailed study spanning essentially the period from the first printed edition of Pappus Collection 1588 in Latin translation and Descartes death in 1650 Bos explores the current ideas about construction and geometrical exactness noting that by the time Descartes entered the field the incursion of algebraic techniques combined with an increasing uncertainty about the proper means of geometrical problem solving had produced a certain impasse Hethen analyses how Descartes transformed geometry by a redefinition of exactness and by a demarcation of geometry s

proper subject and procedures in such a way as to incorporate the use of algebraic methods without destroying the true nature of geometry Although mathematicians later essentially discarded Descartes methodological convictions his influence was profound and pervasive Bos insistence on the foundational aspects of the Geometry provides new insights both in the genesis of Descartes masterpiece and in its significance for the development of the conceptions of mathematical exactness
