Multiply by the conversion factor and add to find 1 ft. 3 in. purely in terms of feet

$$1 \text{ in} \times \left(\frac{1 \text{ ft}}{12 \text{ in}} \right) = 0.0833 \text{ ft}$$

— This effectively means that there are 0.0833 feet in every inch

$$1 \text{ ft} + 3(0.0833 \text{ ft}) = 1.249 \text{ ft}$$

Aliprantis, Kim C. Border, 2013-03-14 In the nearly five years since the publication of what we refer to as The Hitchhiker s Guide we have been the recipients of much advice and many complaints That combined with the economics of the publishing industry convinced us that the world would be a better place if we published a second edition of our book and made it available in paperback at a more modest price The most obvious difference between the second and the original edition is the reorganization of material that resulted in three new chapters Chapter 4 collects many of the purely set theoretical results about measurable structures such as semirings and algebras The material in this chapter is quite independent from notions

of measure and integration and is easily accessible so we thought it should come sooner We also divided the chapter on correspondences into two separate chapters one dealing with continuity the other with measurability The material on measurable correspondences is more detailed and we hope better written We also put many of the representation theorems into their own Chapter 13 This arrangement has the side effect of forcing the renumbering of almost every result in the text thus rendering the original version obsolete We feel bad about that but like Humpty Dumpty we doubt we could put it back the way it was The second most noticeable change is the addition of approximately seventy pages of new material
