

Producing a data-driven physical climate risk assessment

Identifying which risks are most material to you is a crucial first step

- Companies are increasingly having to comply with climate risk regulations in line with the recommendations of the TCFD
- Granular, forward-looking risk data is key to identifying a company's exposure to physical climate risks
- Data-driven scenario analysis is a vital tool for companies looking to embed climate-related issues into enterprise risk management

Mandatory reporting in line with the recommendations of the Task Force for Climate-related Financial Disclosures (TCFD) has sprung up across the globe as governments follow investors in demanding companies set out how they plan to identify and manage climate risks. The UK, EU, Japan, Singapore, and Canada already have requirements in place, while the SEC in the United States is mobilising to bring in similar regulations. Other reporting standards and frameworks, such as ISSB, the EU's ESRS, CDP and the GRI are also coalescing around the TCFD recommendations.

This is clearly no flash in the pan. Understandably, far-sighted companies are looking to prepare for mandatory reporting, but also recognise that embedding climate change into enterprise risk management can be as much about spotting opportunities as avoiding threats.

However, getting to grips with the finer details of TCFD remains a significant challenge for some companies – with lack of knowledge and data gaps particular pain points. In this guide we'll go through how to address both of those issues using our new Climate Risk Dataset to identify and analyse physical climate risks and conduct scenario analysis.

Identifying your risks

No two companies' operational footprints or supply chains are alike: the materiality of physical climate risks depends on an organisation's operations and the markets it is exposed to. Physical risks range from short-lived 'acute' risks, such as increasingly severe heatwaves, to more gradual and inherently longer-term 'chronic' risks, like sea level rise.

How these risks impact a business will also vary. Acute and chronic risks can affect organisations directly – like a heatwave impacting crop production – or indirectly, such as successive disasters weakening a country's economy and eroding market opportunities.

Identifying which risks are most material to you is a crucial first step. Our Climate Risk Dataset covers 32 hazards and issues globally, ranging from physical climate risks, including heat, precipitation, drought and sea level rise, to socio-economic vulnerabilities and adaptive capacity.

Maplecroft Climate Change Risk Report:

Climate Change Impacts on Ocean and Coastal Law Randall S. Abate, 2015-01-28 Ocean and coastal law has grown rapidly in the past three decades as a specialty area within natural resources law and environmental law. The protection of oceans has received increased attention in the past decade because of sea level rise, ocean acidification, the global overfishing crisis, widespread depletion of marine biodiversity such as marine mammals and coral reefs, and marine pollution. Paralleling the growth of ocean and coastal law, climate change regulation has emerged as a focus of international environmental diplomacy and has gained increased attention in the wake of disturbing and abrupt climate change related impacts throughout the world that have profound implications for ocean and coastal regulation and marine resources. *Climate Change Impacts on Ocean and Coastal Law* effectively unites these two worlds. It raises important questions about whether and how ocean and coastal law will respond to the regulatory challenges that climate change presents to resources in the oceans and coasts of the U.S. and the world. This comprehensive work assembles the insights of global experts from academia and major NGOs, e.g., Center for International Environmental Law, Ocean Conservancy, and Environmental Law Institute, to address regulatory challenges from the perspectives of U.S. law, foreign domestic law, and international law. **Global Corruption**

Report: Climate Change Transparency International, 2013-11-26 The global response to climate change will demand unprecedented international cooperation, deep economic transformation, and resource transfers at a significant scale. Corruption threatens to jeopardise these efforts. Transparency International's *Global Corruption Report: Climate Change* is the first publication to comprehensively explore such corruption risks. More than fifty leading experts and practitioners contribute, covering four key areas: governance, investigating major governance challenges towards tackling climate change, mitigating climate change, reducing greenhouse gas emissions with transparency and accountability, adapting to climate change, identifying corruption risks in climate proofing, development financing, and implementation of adaptation, forestry governance, responding to the corruption challenges plaguing the forestry sector, and how these challenges need to be integrated into current international strategies to halt deforestation and promote reforestation. The *Global Corruption Report: Climate Change* provides essential policy analysis to help policy makers, practitioners, and other stakeholders understand these risks and develop effective responses at a critical point in time when the main architecture for climate governance is being developed.

Climate Change and Disaster Risk Management Walter Leal Filho, 2012-08-10 There has been some degree of reluctance in the past to consider disaster risk management within the mainstream of adaptation to climate variability and climate change. However, there is now wide recognition of the need to incorporate disaster risk management concerns in dealing with such phenomena. There is also a growing awareness of the necessity for a multi-sectoral approach in managing the effects of climate variability and climate change, since this can lead to a significant reduction of risk. This book presents the latest findings from scientific research on climate variation, climate change, and their links with disaster risk.

management It showcases projects and other initiatives in this field that are being undertaken in both industrialised and developing countries by universities and scientific institutions government bodies national and international agencies NGOs and other stakeholders Finally it discusses current and future challenges identifying opportunities and highlighting the still unrealised potential for promoting better understanding of the connections between climate variation climate change and disaster risk management worldwide *Responding to Climate Change in Asian Cities* Diane Archer, Sarah

Colenbrander, David Dodman, 2016-11-03 The role of cities in addressing climate change is increasingly recognised in international arenas including the Sustainable Development Goals the UN Framework Convention on Climate Change and the New Urban Agenda Asia is home to many of the countries that are most vulnerable to climate change impacts and along with Africa will be the site of most urban population growth over the coming decades Bringing together a range of city experiences *Responding to Climate Change in Asian Cities* provides valuable insights into how cities can overcome some of the barriers to building climate resilience including addressing the needs of vulnerable populations The chapters are centred on an overarching understanding that adaptive urban governance is necessary for climate resilience This requires engaging with different actors to take into account their experiences vulnerabilities and priorities building knowledge including collecting and using appropriate evidence and understanding the institutions shaping interactions between actors from the national to the local level The chapters draw on a mix of research methodologies demonstrating the variety of approaches to understanding and building urban resilience that can be applied in urban settings Bringing together a range of expert contributors this book will be of great interest to scholars of urban studies sustainability and environmental studies development studies and Asian studies *Reconsidering the Impact of Climate Change on Global Water Supply, Use, and Management* Rao, Prakash, Patil, Yogesh, 2016-11-04

Changes in the planet's climate in recent years have led to significant impacts on natural resources and ecosystems New strategies must be adopted in order to support the protection and continued development of numerous natural resources *Reconsidering the Impact of Climate Change on Global Water Supply Use and Management* is a pivotal reference source for the latest scholarly material on the relationship between global climate changes and the planet's water ecosystems Highlighting relevant environmental social and economic issues this book is ideally designed for academics researchers policy makers students and practitioners interested in the impacts of climate change on global water resources **The Social Consequences of Climate Change** Şuay Nîlhan Açıkalm, Şefika Şule

Erçetin, 2024-11-14 Investigating current scientific knowledge about climate change in public and policy discussions as well as the connections between social economic and political discourse this is a rich collection of reflections for how best to respond to a world of increasing climate extremes **Developing European Internal Security Policy** Christian

Kaunert, Sarah Léonard, 2014-06-03 The European Union EU is making strong inroads into areas of security traditionally reserved to states especially into internal security or Justice and Home Affairs The Area of Freedom Security and Justice

AFSJ as it has been renamed in the Amsterdam Treaty has seen significant policy developments since the late 1990s. In fact, there has been no other example of a policy making area making its way so quickly and comprehensively to the centre of the treaties and to the top of the EU's policy making agenda. After major treaty revisions in Maastricht, Amsterdam, Nice and finally the Lisbon Treaty which entered into force on 1 December 2009, as well as an increased political impetus through the European Council Summits in Tampere 1999, the Hague 2004 and Stockholm 2009, the area appears as one of the most promising policy fields for integration in the EU in the foreseeable future. This process has deepened even more significantly after the terrorist attacks on 11 September 2001 in the United States, on 11 March 2004 in Madrid and on 7 July 2005 in London. This book is the first to analyse these hugely topical developments in European internal security at both the treaty and policy levels as well as its implementation at the national level from various disciplinary perspectives: political science, law, criminology etc. This book was published as a special edition of *European Security*.

Climatic Hazards in Coastal Bangladesh Bimal Paul, Harun Rashid, 2016-09-28. *Coastal Hazards in Bangladesh: Non Structural and Structural Solutions* provides a review of the study of Bangladesh's coastal region, an area whose location and physical geography present the perfect microcosm for the study of coastal hazards and for the development of tactics that are applicable to regions around the world. The book presents engineers, scientists and planners with the necessary tools and planning solutions used to combat coastal vulnerabilities in Bangladesh. Divided into seven chapters, it begins with a critical overview of cyclone and storm surge disasters, focusing on both engineering responses and public preparedness programs to such events. In addition, engineering recommendations are provided for further reduction of their impacts, such as erosion, accretion and land subsidence, and numerical models are introduced to assess flood induced hazard and risk, flood induced design loads and how to intervene in protecting key installations, infrastructures and communities. Provides engineers, scientists and planners with the necessary tools and planning solutions they need to address the coastal vulnerabilities presented by floods, cyclones and storm surge. Includes engineering recommendations on how to reduce coastal hazards and their impact. Explores the topic of sea level rise and the effect of salt water intrusion on fresh water and the surrounding soil. Examines land uses in the coastal zones, their trend and their effects on coastal zones.

Climate Change and Natural Disasters Vinod Thomas, 2017-01-31. The start of the new millennium will be remembered for deadly climate related disasters: the great floods in Thailand in 2011, Super Storm Sandy in the United States in 2012 and Typhoon Haiyan in the Philippines in 2013, to name a few. In 2014, 17.5 million people were displaced by climate related disasters, ten times more than the 1.7 million displaced by geophysical hazards. What is causing the increase in natural disasters and what effect does it have on the economy? *Climate Change and Natural Disasters* sends three messages: human made factors exert a growing influence on climate related disasters because of the link to anthropogenic factors, there is a pressing need for climate mitigation and prevention, including climate adaptation, ought not to be viewed as a cost to economic growth but as an investment. Ultimately, attention to climate related

disasters arguably the most tangible manifestation of global warming may help mobilize broader climate action It can also be instrumental in transitioning to a path of low carbon green growth improving disaster resilience improving natural resource use and caring for the urban environment Vinod Thomas proposes that economic growth will become sustainable only if governments political actors and local communities combine natural disaster prevention and controlling climate change into national growth strategies When considering all types of capital particularly human capital climate action can drive economic growth rather than hinder it *Identifying Emerging Issues in Disaster Risk Reduction, Migration, Climate Change and Sustainable Development* Karen Sudmeier-Rieux,Manuela Fernández,Ivanna M. Penna,Michel Jaboyedoff,J.C.

Gaillard,2016-08-29 The goal of this book is to explore disaster risk reduction DRR migration climate change adaptation CCA and sustainable development linkages from a number of different geographical social and natural science angles Well known scientists and practitioners present different perspectives regarding these inter linkages from around the world with theoretical discussions as well as field observations This publication contributes in particular to the discussion on the Sendai Framework for Disaster Risk Reduction SFDRR 2015 2030 and the debate about how to improve DRR including CCA policies and practices taking into account migration processes from a large perspective where both natural and social factors are crucial and mutually alloyed Some authors see the SFDRR as a positive step forward in terms of embracing a multitude of issues others doubting that the agreement will lead to much concrete action toward real action on the ground This book is a timely contribution for researchers students and policy makers in the fields of environment human geography migration disaster and climate change studies who seek a more comprehensive grasp of contemporary development issues *Limits to Climate Change Adaptation* Walter Leal Filho,Johanna Nalau,2017-11-15 This book sheds new light on the limits of adaptation to anthropogenic climate change The respective chapters demonstrate the variety of and interconnections between factors that together constitute the constraints on adaptation The book pays special attention to evidence that illustrates how and where such limits have become apparent or are in the process of establishing themselves and which indicates future trends and contexts that might prove helpful in understanding adaptation limits In particular the book provides an overview of the most important challenges and opportunities regarding adaptation limits at different temporal jurisdictional and spatial scales while also highlighting case studies projects and best practices that show how they may be addressed The book presents innovative multi disciplinary research and gathers evidence from various countries sectors and regions the goal being to advance our understanding of the limits to adaptation and ways to overcome or modify them

Land Cover Change and Its Eco-environmental Responses in Nepal Ainong Li,Wei Deng,Wei Zhao,2017-08-22 This book offers a systematic investigation of the ecological and environmental issues related to the land cover changes in Nepal by researchers from both China and Nepal It discusses the eco environmental issues faced by Nepal particularly in the hills and mountain regions It also sheds light on the global concerns regarding the eco environment issues of mountains and analyzes

the various causes and potential consequences of eco environmental degradation in Nepal The book is of particular interest to students researchers experts and decision makers wanting to gain a general overview of land cover in Nepal and its dynamics environment and natural resources as well as mountain hazards *International Arbitration in the Energy Sector* Maxi Scherer,2018-02-22 Disputes in the energy and natural resources sector are at the heart of international arbitration With more arbitrations arising in the international energy sector than in any other sector it is not surprising that the highest valued awards in the history of arbitration come from energy related arbitrations Energy disputes often involve complex and controversial issues relating to security sovereignty and public welfare International Arbitration in the Energy Sector puts international energy disputes into a global context providing broad coverage of different forms and systems of dispute resolution across both renewable and non renewable sectors With contributions from leading arbitrators academics and industry experts from across the globe the twenty chapters in the book enable readers to compare the approaches to and learnings from energy arbitrations across various legal systems and geographic regions After outlining the international energy arbitration legal framework in Part I the text delves into a detailed analysis of the problems which regularly arise in practice These include among other things commercial disputes in Part II e g over the upstream oil sector and long term gas supply contracts investor state disputes in Part III e g under the Energy Charter Treaty and public international law disputes in Part IV e g concerning international boundaries and the distribution of natural resources Alongside recent developments in the international energy sector attention is given to climate and sustainable development disputes which raise important questions about enforcing sustainability objectives on individuals corporations and states Backed by analyses of arbitral awards national court and international tribunal decisions treaties and other international legal instruments as well as current events and news in the energy industry this text offers a unique contribution to international energy literature and provides insightful commentary on the prevalent issues in the field It is essential reading for any practitioner or researcher in the energy and natural resources sector **Energy Flows, Material Cycles and Global Development** Georg Schaub,Thomas Turek,2010-12-13 The book deals with the global flows of energy and materials and changes caused by human activities Based on these facts the limitations of anthropogenic energy and material flows and the resulting consequences for the development of human societies are discussed Different scenarios for lifestyle patterns are correlated with the world s future development of energy supply and climate The book provides a process engineering approach to the Earth system and global development It requires basic understanding of mathematics physics chemistry and biology and provides an insight into the complex matter for readers ranging from undergraduate students to experts **Climate Change, Agriculture and Rural Livelihoods in Developing Countries** Keshav Lall Maharjan,Niraj Prakash Joshi,2013-05-13 This book is about climate change and its relation to agriculture and rural livelihoods It starts by providing a basic understanding of climate change science followed by the relation of climate change to agriculture the impact of which

is discussed based on the particular impact of climate change on plant and animal physiology The book further discusses the inclusion of the agriculture sector in various international climate change negotiations It also reviews the cost and opportunities for agricultural projects through international climate change regimes specifically the Clean Development Mechanism under the Kyoto Protocol With this background the book finally proceeds to an explanation of the methodologies used to assess the impact of climate change on agriculture and empirically discusses its impact on agriculture and rural livelihoods in Nepal

The Palgrave Handbook of Global Sustainability Robert Brinkmann, 2023-04-04 The field of sustainability continues to evolve as a discipline The world is facing multiple sustainability challenges such as climate change water depletion ecosystem loss and environmental racism The Handbook of Sustainability will provide a comprehensive reference for the field that examines in depth the major themes within what are known as the three E s of sustainability environment equity and economics These three themes will serve as the main organizing body of the work In addition the work will include sections on history and sustainability major figures in the development of sustainability as a discipline and important organizations that contributed or that continue to contribute to sustainability as a field The work is explicitly global in scope as it considers the very different issues associated with sustainability in the global north and south

Climate Change and International Trade Rafael Leal-Arcas, 2013-01-01 Rafael Leal Arcas expertly examines the interface of climate change mitigation and international trade law with a view to addressing the question How can we make best use of the international trading system experience to aim at a global climate change agreement The insightful book contributes to developing the architecture for a post 2012 global climate agreement and in doing so seeks and proposes new approaches to climate change mitigation by linking it to the international trade system The author suggests the adoption of a

bottom up approach to climate change negotiations by using the evolution of multilateral trade agreements as a model for reaching a global climate treaty He discusses the innovative approach of inserting climate goals within regional trade agreements given their proliferation especially bilateral in the international trading system He explains the trade implications of climate change mitigation policies by analyzing a couple of areas where the international regimes for trade and climate change mitigation may potentially clash Climate Change and International Trade will strongly appeal to undergraduate and graduate students of international and European trade law international and European environmental law as well as social science academics NGOs think tanks practitioners researchers and international organizations will also find plenty of valuable information in this timely resource

Climate Risk and Adaptation in the Electric Power Sector

Asian Development Bank,2012-07-01 This report aims to highlight and raise awareness on the exposure and vulnerability of the energy sector to climate change It also identifies adaptation options available to each source of energy generation as well as for the distribution and end use of electrical energy

Land Use Management in Disaster Risk Reduction

Michiko Banba,Rajib Shaw,2016-12-05 This book provides a wide range of studies on methods of assessing natural disaster risks and reducing those risks in the context of land use A major benefit of the book is that it presents extensive research and practices from interdisciplinary perspectives through case studies of land use management against various natural disasters The natural hazards include earthquakes tsunamis floods and other disasters with case studies ranging from urban areas to areas with natural environments such as mountains coasts and river systems By quantitative and qualitative analysis this work illustrates how interactions between natural and human environments create natural disasters and how disaster risks can be managed or reduced through methods related to land use This book also covers a variety of challenges in land use management with sample cases from Asia as well as the United States and Europe The main purpose is to provide greater insight into studies of natural disaster risks from the perspective of land use and the possibility of non engineering methods to reduce those risks This goal can be achieved through management of land use against various natural hazards in diverse environments
