de l'état et ceux des collectivités locales La possibilité d'urbaniser dans les zones inondables illustre la prépondérance des outils techniques sur le portage politique et la réflexion démocratique Pourtant plus les débats sur les inondations sont restreints aux décisions techniques plus la sectorisation entre les politiques publiques se renforce au détriment d'une prévention efficace L'essor des politiques de développement durable permettra-t-il de concilier aménagement des territoires et prévention des risques

Floods Freddy Vinet, 2017-11-22 The management of flood risk seems to be facing a daunting paradox Despite increasingly effective risk knowledge tools and the efforts of international institutions to place risk reduction at the top of the agenda the cost of disasters continues to increase It is also increasingly difficult to avoid the urbanization or development of potential flood zones The fundamental issue involves determining the conditions necessary for efficient prevention by focusing on adaptability to risk which implies coping with the risk of flooding rather than directly fighting against it or simply ignoring it This second volume of the Floods series of books explores existing policies and tools which mitigate the impact of flooding the construction of protective structures the reduction of vulnerability land use planning the improvement of crisis management etc The closing chapters focus on the question of adaptation through post flood reconstruction integrating disaster risk reduction measures e.g. through resilient urbanism Presents the state of the art surrounding flood issues from the description of the phenomena to the management of risk dikes dams reducing vulnerability and management of crisis Written by specialists but accessible to mainstream scientists Exposes knowledge methodologies scientific locks and the prospects of each discipline on the theme of floods
