Wings over the Great Plains: Bird Migrations in the Central Flyway Paul

Johnsgard,2012-11-19 The Central Flyway has been recognized as a collective North South migratory pathway centered on the North American Great Plains for nearly a century but it has never been analyzed as the species that most closely follow it or the major stopping points used by those species on their journeys between their northern breeding and southern wintering grounds A total of 114 U S and 21 Canadian localities of special importance to birds migrating within the Central Flyway are identified and described in detail Judging from available regional state and local information nearly 400 species of 50 avian families regularly use the Central Flyway during their migrations Nearly 90 Central Flyway species have wintering areas partly extending variably far into the Neotropic zoogeographic realm and at least 50 of these winter entirely within the Neotropic realm A few of these species undertake some of the longest known migrations of all birds in excess of 8 000 miles in each direction Seven maps 49 figures and over 100 literature citations are included Abstract **Kingdom Hearts HD**

Behavioural Ecology of Western Palearctic Falcons Giovanni Leonardi, 2020-12-07 This monograph is the result of eight years of bibliographical and field research concerning several behavioural ecology aspects of the Palaearctic falcons For a while this book grew along with The Lanner falcon published in 2015 and revised in 2017 In both books the main aim was to provide a clear overview of the biology and ecology of these species In fact in the last 20 years the number of publications on falcons has grown tremendously and in parallel also those belonging to the so called grey literature The number of people involved is also increased by including both academics and nature lovers Many previously published books emphasized identification and offered little insights on the behavioural and ecological aspects of the species Very often the research on behavioural ecology remains closed within the confines of academic community By contrast a multitude of basic data is scattered in countless articles published in local magazines Many falcon species are easy to observe and study such as kestrels but others are more rare and localized In order to understand the survival strategies adopted by this group of avian predators it is necessary not to lose sight of the overall picture This book tries to explain the different survival strategies by examining through a few essential chapters some crucial aspects for all species The first chapter provides information on the genus Falco its genetics evolution and morphological peculiarities The other chapters deal with reproductive strategies competition exploitation of resources dispersal patterns communication and sociality One of the main objectives of this book is to produce an accessible but scholarly curated source of reference By understanding the most common species it is possible to provide a working framework for rarer and
