SYNER-G: Typology Definition and Fragility Functions for Physical Elements at Seismic Risk K. Pitilakis, H. Crowley, A.M. Kaynia, 2014-01-20 Fragility functions constitute an emerging tool for the probabilistic seismic risk assessment of buildings infrastructures and lifeline systems The work presented in this book is a partial product of a European Union funded research project SYNER G FP7 Theme 6 Environment where existing knowledge has been reviewed in order to extract the

most appropriate fragility functions for the vulnerability analysis and loss estimation of the majority of structures and civil works exposed to earthquake hazard Results of other relevant European projects and international initiatives are also incorporated in the book In several cases new fragility and vulnerability functions have been developed in order to better represent the specific characteristics of European elements at risk Several European and non European institutes and Universities collaborated efficiently to capitalize upon existing knowledge State of the art methods are described existing fragility curves are reviewed and where necessary new ones are proposed for buildings lifelines transportation infrastructures as well as for utilities and critical facilities Taxonomy and typology definitions are synthesized and the treatment of related uncertainties is discussed A fragility function manager tool and fragility functions in electronic form are provided on extras springer com Audience The book aims to be a standard reference on the fragility functions to be used for the seismic vulnerability and probabilistic risk assessment of the most important elements at risk It is of particular interest to earthquake engineers scientists and researchers working in the field of earthquake risk assessment as well as the insurance industry civil protection and emergency management agencies Monthly Catalog of United States Government Publications United States. Seismic Considerations for Steel Storage Racks Located in Areas Accessible to the Public (FEMA 460 / September 2005) Federal Emergency Agency,U. S. Department Security,2013-04-03 During the past few decades the number of large public warehouse stores often referred to as big box stores across the nation has grown significantly changing both consumer buying habits and the public s risk of injury during earthquakes During an earthquake occupant safety in a big box store depends on both the structural performance of the building and on the performance of the storage racks and their contents Earthquake ground motions can cause storage racks to collapse or overturn if they are not properly designed installed maintained and loaded In addition goods stored on the racks may spill or topple off Both occurrences pose a life safety risk to the exposed shopping public The immediate stimulus for the project that resulted in this report was a 2003 request from the State of Washington to the Federal Emergency Management Agency FEMA for guidance concerning the life safety risk posed by the storage racks in publicly accessible areas of retail stores especially the risk of rack collapse of loss of stored goods during an earthquake FEMA asked the Building Seismic Safety Council BSSC to develop the requested guidance To do so the BSSC established a Rack Project Task Group composed of practicing engineers storage rack designers researchers representatives of the Rack Manufacturers Institute RMI and the Retail Industry Leaders Association and members of applicable technical subcommittees responsible for updating the NEHRP Recommended Provisions In developing this guidance document the Task Group focused primarily on steel single selective pallet storage racks It reviewed available information on storage rack performance during earthquakes and the background on the development of standards and code requirements for storage racks assessed seismic requirements for storage racks and current practices with respect to rack design maintenance and operations quality assurance and post earthquake inspections and examined available research and testing data Based on its study the Task Group developed short term recommendations to improve current practice and formulated long term recommendations to serve as the basis for improved standards documents such as the NEHRP Recommended Provisions ASCE 7 and the RMI developed storage rack specification Over the near term the Task Group recommends that the 2003 NEHRP Recommended Provisions requirements for steel single selective pallet storage rack design be followed and that connections be checked in accordance with a procedure to be developed by RMI The Task Group also recommends that additional guidance presented in this report be voluntarily adopted by store owners and operators Further given the fact that maintenance and use of storage racks is a key element to their acceptable performance during earthquakes store owners and operators should adopt an appropriate quality assurance plan as a minimum the best self imposed practices of store owners and operators should be maintained The Task Group s primary long term recommendation is that the RMI specification be brought into conformance with the 2003 NEHRP Recommended Provisions which is the basis for seismic requirements found in current seismic design standards and model

building codes The Task Group also recommends that optional performance based and limit state procedures and component cyclic testing procedures be incorporated into the RMI developed specification Compliance with these procedures will demonstrate that the storage racks have the capacity to resist maximum considered earthquake ground motions without collapse It also is recommended that regulatory bodies periodically review the quality assurance programs of stores and implement any regulations needed to satisfy life safety concerns that relate to the securing of rack contents and rack maintenance and use **Commerce Business Daily** ,2001-03 *Municipal Journal, Public Works Engineer and Contractors' Guide* ,1964
