On The Move to Meaningful Internet Systems 2003: OTM 2003 Workshops Zahir Tari, 2003-10-25 missions in fact also treat an envisaged mutual impact among them As for the 2002 edition in Irvine the organizers wanted to stimulate this cross pollination with a program of shared famous keynote speakers this year we got Sycara ble Soley and Mylopoulos and encouraged multiple attendance by providing authors with free access to another conference or workshop of their choice We received an even larger number of submissions than last year for the three conferences 360 in total and the workshops 170 in total Not only can we therefore again claim a measurable success in attracting a representative volume of scientific papers but such a harvest allowed the program committees of course to compose a high quality cross section of worldwide research in the areas covered In spite of the increased number of submissions the Program Chairs of the three main conferences decided to accept only approximately the same number of papers for presentation and publication as in 2002 i e around 1 paper out of every 4 5 submitted For the workshops the acceptance rate was about 1 in 2 Also for this reason we decided to separate the proceedings into two volumes with their own titles and we are grateful to Springer Verlag for their collaboration in producing these two books The reviewing process by the respective program committees was very professional and each paper in the main conferences was reviewed by at least three referees **On The Move to Meaningful Internet Systems**

The Computer User's Survival Guide Joan Stigliani, 1995-10-01 You probably suspect on some level that computers might be hazardous to your health. You might vaguely remember a study that you read years ago about miscarriages being more frequent for data entry operators. Or you might have run into a co-worker wearing splints and talking ominously about Workers Comp insurance. Or you might notice that when you use a computer too long you get stiff and your eyes get dry. But who wants to worry about such things? Surely the people wearing splints must be malingerers who don't want to work. Surely the people who design keyboards and terminals must be working to change their products if they are unsafe. Surely so long as you're a good worker and keep your mind on your job, nothing bad will happen to you. The bad news is: You can be hurt by working at a computer. The good news is that many of the same factors that pose a risk to you are within your own control. You can take action on your own to promote your own health, whether or not your terminal manufacturer, keyboard designer, medical provider, safety trainer, and boss are working diligently to protect you. The Computer User's Survival Guide looks squarely at all the factors that affect your health on the job, including positioning equipment, work habits, lighting, stress, radiation, and general health. Through this guide, you will learn a continuum of neutral postures that you can utilize at different work tasks; how radiation drops off with distance; and what electrical equipment is responsible for most exposure. How modern office lighting is better suited to working on paper than on a screen; and what you can do to prevent glare. Simple breathing techniques and stretches to keep your body well oxygenated and relaxed, even when you sit all day. How reading from a screen puts unique strains on your eyes; and what kind of vision breaks will keep you most productive and rested. What's going on under the skin when your hands and arms spend much of the day mousing and typing; and how you can apply that knowledge to prevent overuse injuries. The Computer User's Survival Guide is not a book of gloom and doom. It is a guide to protecting yourself against health risks from your computer while boosting your effectiveness and your enjoyment of work.
