Artificial Life and Computational Intelligence Tapabrata Ray, Ruhul Sarker, Xiaodong Li, 2016-01-22 This book constitutes the proceedings of the Second Australasian Conference on Artificial Life and Computational Intelligence ACALCI 2016 held in Canberra ACT Australia in February 2016 The 30 full papers presented in this volume were carefully reviewed and selected from 41 submissions They are organized in topical sections named mathematical modeling and theory learning and optimization planning and scheduling feature selection and applications and games Russian Fractals in Indigenous Artifacts Abdul Karim Bangura, Leonid A. Zhigun, 2025-06-22 This book is the first comprehensive work on Russian Fractals in indigenous artifacts While existing works focus on universal phenomena such as liquid crystal or finance none explore the intersection between Fractals and Russia Russian Fractals in Indigenous Artifacts therefore investigates how indigenous Russian cultures have a wonderful Fractal heritage that was originally tied to socially just and ecologically sustainable social practices including those of indigenous northern groups such as the Yakut Fractal designs originally allowed unalienated value both human and nonhuman to be visible thereby enabling just and sustainable living This book also examines how the tsarist elite encouraged the creation of unique creative masterpieces developing and strengthening traditional crafts and art of indigenous people hence Fabergé or imperial architecture Today the challenge for contemporary Russia is to reestablish the relationship between the social and ecological sustainability of indigenous cultures and practices for which we can now provide modeling and analysis Lay attempts at this have only limited success as they have based the attempts on a purely religious basis which recognizes the ecological aspects but often succumbs to authoritarian nationalism However the freely accession of indigenous peoples to Russia for the sake of national liberation has had a positive effect on enriching them with spirituality and creativity by Fractal artifacts through friendly exchanges with one another In Russian Fractals in Indigenous Artifacts Bangura and Zhigun express why there is a need for a forward thinking Fractal renaissance in Russia bringing together contemporary computational and scientific analyses with these ecologically and socially sustainable traditions

Handbook of Neuroscience and the Built Environment Alexandros A. Lavdas, Ann Sussman, A. Vernon

Woodworth, 2025-10-01 According to the OECD Organization for Economic Cooperation and Development in the 21st century we are living in a New Age of Biology, acknowledging the rapid development of transformative findings in the life sciences. The Routledge Handbook of Neuroscience and the Built Environment shows how these new findings impact architecture, planning and design, changing our understanding of how people respond to their surroundings and how they can be optimized for our well-being. A total of 31 chapters presented in six sections discuss human perception, the need for connection and how design impacts health and well-being through topics such as neuroaesthetics, color, memory and place, proportion, sound, neurophenomenology, neurodiversity, biophilia, beauty, artificial intelligence among many others. Expert international contributors look to answer key questions as follows: What do architects and designers need to know about neuroscience? How does architecture and design impact us non-consciously? Why is acknowledging the human subliminal experience important? What tools can designers use to see our subliminal behaviors? This volume will be important reading for the design community, whether practicing, educating or studying, as well as policy makers and public health professionals.

Self-Different Fractals and Innovation David F. J. Campbell, Elias G. Carayannis, 2025-09-19 The presented ideas create and shape the vision of a Manifesto of Higher Education Governance. Fractals are typically understood as self-similar.

structures but this concept is expanded to include self different fractals These fractals align with a Philosophy of Dialectics where opposing forces thesis and antithesis can either create disruption or when managed effectively drive creativity innovation and development Because self different fractal systems operate in multiple modes they hold greater potential for fostering innovation This conceptual exploration investigates innovation in higher education through dialectical approaches presenting the entrepreneurial university as a thesis the academic firm as an antithesis and epistemic governance as a synthesis Epistemic governance plays a key role in motivating innovation by integrating pluralistic knowledge and innovation modes The concept of self different fractal innovation systems structures that embody multiple interacting modalities enhances innovation potential through their fluid complexity Good and effective governance of these systems encourages continual knowledge evolution enabling the development of next knowledge This process guided by the dialectics of innovation forms new integrated structures and networks The book emphasizes interdisciplinary and transdisciplinary approaches with the latter involving collaboration between scholars and user communities for real world impact It bridges science and art suggesting that visual representations of self different fractals inspire artistic research alongside scientific inquiry Through examining both linear and non linear systems the authors reveal how conflicting principles can generate productive chaos ultimately driving innovation societal progress and knowledge democracy The future of governance is also the future of higher education
