Jeffrey Holt,2013-04-01 Many students of linear algebra hit a wall at mid semester Having spent the first part of the term
doing mostly computational work they are unprepared for the rigors of conceptual thinking in an abstract setting that is
frequently the focus of the second half of the course Holt s Linear Algebra with Applications blends computational and
conceptual topics throughout Early treatment of conceptual topics in the context of Euclidean space gives students more
time and a familiar setting in which to absorb them This organization also makes it possible to treat eigenvalues and
eigenvectors earlier than in most texts Abstract vector spaces are introduced later once students have developed a solid
conceptual foundation Concepts and topics are frequently accompanied by applications to provide context and motivation
Because many students learn by example Linear Algebra with Applications provides a large number of representative
examples over and above those used to introduce topics The text also has over 2500 exercises covering computational and
conceptual topics over a range of difficulty levels
