Cyclone 1878 Diane DeRome,2010-07-20 Cyclone 1878 The cyclone of 1878 was an actual hurricane that started in the Caribbean and raced all the way up to Lake Superior taking over 22 000 lives in its wake The facts of the hurricane remain cloudy but this story is about the fictional island of St Morantz and how the island faces the cyclone and overcomes adversity changing the course of history and making their island paradise a new jewel of the Caribbean This is a story of how one man changed the island and how his courage forced the wealthy plantation owners to end slavery in order to save their island in the cyclone s aftermath of destruction This book is for 10 years old and up Mobile Robot: Motion Control and Path Planning Ahmad Taher Azar,Ibraheem Kasim Ibraheem,Amjad Jaleel Humaidi,2023-06-30 This book presents the recent

research advances in linear and nonlinear control techniques From both a theoretical and practical standpoint motion planning and related control challenges are key parts of robotics Indeed the literature on the planning of geometric paths and the generation of time based trajectories while accounting for the compatibility of such paths and trajectories with the kinematic and dynamic constraints of a manipulator or a mobile vehicle is extensive and rich in historical references Path planning is vital and critical for many different types of robotics including autonomous vehicles multiple robots and robot arms In the case of multiple robot route planning it is critical to produce a safe path that avoids colliding with objects or other robots When designing a safe path for an aerial or underwater robot the 3D environment must be considered As the number of degrees of freedom on a robot arm increases so does the difficulty of path planning As a result safe pathways for high dimensional systems must be developed in a timely manner Nonetheless modern robotic applications particularly those requiring one or more robots to operate in a dynamic environment e g human robot collaboration and physical interaction surveillance or exploration of unknown spaces with mobile agents etc pose new and exciting challenges to researchers and practitioners For instance planning a robot s motion in a dynamic environment necessitates the real time and online execution of difficult computational operations The development of efficient solutions for such real time computations which could be offered by specially designed computational architectures optimized algorithms and other unique contributions is thus a critical step in the advancement of present and future oriented robotics
