Diagnostic Report of the National Hurricane Center , **Mariners Weather Log** ,1984 *Monthly Weather Review* ,1984 Hurricane Alicia--prediction, Damage, and Recovery Efforts United States. Congress. House. Committee on Science and Technology. Subcommittee on Natural Resources, Agriculture Research, and Environment,1984 *Recent Hurricane Research* Anthony Lupo,2011-04-19 This book represents recent research on tropical cyclones and their impact and a wide range of topics are covered An updated global climatology is presented including the global occurrence of tropical cyclones and the terrestrial factors that may contribute to the variability and long term trends in their occurrence Research also examines long term trends in tropical cyclone occurrences and intensity as related to solar activity while other research discusses the impact climate change may have on these storms The dynamics and structure of tropical cyclones are studied with traditional diagnostics employed to examine these as well as more modern approaches in examining their thermodynamics The book aptly demonstrates how new research into short range forecasting of tropical cyclone tracks and intensities using satellite information has led to significant improvements In looking at societal and ecological risks and damage assessment authors investigate the use of technology for anticipating and later evaluating the amount of damage that is done to human society watersheds and forests by land falling storms The economic and ecological vulnerability of coastal regions are also studied and are supported by case studies which examine the potential hazards related to the evacuation of populated areas including medical facilities These studies provide decision makers with a potential basis for developing improved evacuation techniques **Louisiana Weather and Climate** Vega, Manuel,Anthony J. navigate and because the climate crisis is inherently multidimensional technical expertise in isolation is not enough Climate Changed examines models and their imperfect yet central role in understanding the relationship between global climate dynamics and the human built environment It compares and synthesizes the methods and function of models in disciplines ranging from architecture and planning to climate science and natural hazards research This book considers how disparate models are woven together to understand the climate crisis underscoring the necessity of combining locally situated and transdisciplinary knowledge with climate science to navigate current and future cataclysmic changes It highlights the challenges and consequences of disciplinary boundaries siloed scientific knowledge and uneven data and develops ways to overcome these limitations As the world faces the effects of climate change climate scientists are debating the future of their field architects engineers and planners are designing in the context of climate change and society at large is grappling with how to take action This book brings those communities together to chart a path forward *Tempest* Liz Skilton, 2019-06-01

Liz Skilton's innovative study tracks the naming of hurricanes over six decades exploring the interplay between naming practice and wider American culture In 1953 the U S Weather Bureau adopted female names to identify hurricanes and other tropical storms Within two years that convention came into question and by 1978 a new system was introduced including alternating male and female names in a pattern that continues today In *Tempest Hurricane Naming and American Culture* Skilton blends gender studies with environmental history to analyze this often controversial tradition Focusing on the Gulf South the nation's hurricane coast Skilton closely examines select storms including Betsy Camille Andrew Katrina and Harvey while referencing dozens of others Through print and online media sources government reports scientific data and ephemera she reveals how language and images portray hurricanes as gendered objects masculine named storms are generally characterized as stronger and more serious while feminine named storms are described as unladylike and in need of taming Further Skilton shows how the hypersexualized rhetoric surrounding Katrina and Sandy and the effeminate depictions of Georges represent evolving methods to define and explain extreme weather events As she chronicles the evolution of gendered storm naming in the United States Skilton delves into many other aspects of hurricane history She describes attempts at scientific control of storms through hurricane seeding during the Cold War arms race of the 1950s and relates how Roxcy Bolton a member of the National Organization for Women led the crusade against feminizing hurricanes from her home in Miami near the National Hurricane Center in the 1970s Skilton also discusses the skyrocketing interest in extreme weather events that accompanied the introduction of 24 hour news coverage of storms as well as the impact of social media networks on Americans tracking and understanding of hurricanes and other disasters The debate over hurricane naming continues as Skilton demonstrates and many Americans question the merit and purpose of the gendered naming system What is clear is that hurricane names matter and that they fundamentally shape our impressions of storms for good and bad **The Washington Post Index**, 2008 *Cloud Warriors* Thomas E. Managing Uncertainty in Crisis Xiaoli Lu, 2017-11-07 This book studies the variety of organizational strategies selected to cope with critical uncertainties during crises This research formulates and applies an institutional sense making model to explain the selection of strategies for coping with uncertainties during crises to answer the question why some organizations select a rule based strategy to cope with uncertainties whereas others pursue a more ad hoc based strategy It finds that the level of institutionalization does not affect strategy selection in the initial phase of responding to crises that three rigidity effects can be identified in the selection of sense making strategies once organizations have faced the failure of their selected strategies that discontinuities in the feedback loop of sense making do not necessarily move organizations to switch their sense making strategies but interact with institutionalization to contribute to switching sense making strategies This book bridges the gap between institutional thinking and crisis management theorizing A major step forward in the world of crisis management studies Professor Arjen Boin Leiden University the Netherlands In a world of increasingly complex sociotechnical systems interacting in high risk environments Professor Lu's analysis of how organizations manage uncertainty is both timely and profound Professor Louise K Comfort Director Center

Global Climate Change and Extreme Weather Events Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2008-10-23 Long before the germ theory of disease was described late in the nineteenth century humans knew that climatic conditions influence the appearance and spread of epidemic diseases Ancient notions about the effects of weather and climate on disease remain embedded in our collective consciousness through expressions such as cold for rhinovirus infections malaria derived from the Latin for bad air and the common complaint of feeling under the weather Today evidence is mounting that earth's climate is changing at a faster rate than previously appreciated leading researchers to view the longstanding relationships between climate and disease with new urgency and from a global perspective On December 4 and 5 2007 the Forum on Microbial Threats hosted a public workshop in Washington DC to consider the possible infectious disease impacts of global climate change and extreme weather events on human animal and plant health as well as their expected implications for global and national security
