Consciousness and the Ontology of Properties Mihretu P. Guta, 2018-07-20 This book aims to show the centrality of a proper ontology of properties in thinking about consciousness Philosophers have long grappled with what is now known as the hard problem of consciousness i.e. how can subjective or qualitative features of our experience such as how a strawberry tastes arise from brain states More recently philosophers have incorporated what seems like promising empirical research from neuroscience and cognitive psychology in an attempt to bridge the gap between measurable mental states on the one hand and phenomenal qualities on the other In *Consciousness and the Ontology of Properties* many of the leading philosophers working on this issue as well as a few emerging scholars have written 14 new essays on this problem The essays address topics as diverse as substance dualism mental causation the metaphysics of artificial intelligence the logic of conceivability constitution extended minds the emergence of consciousness and neuroscience and the unity and neural correlates of consciousness but are nonetheless unified in a collective objective the need for a proper ontology of properties to understand the hard problem of consciousness both on non empirical and empirical grounds **The Morality of Radical Economics** Ron P. Baiman, 2016-08-31 This book is in equal parts a treatise on morality and economics a critique of neoclassical orthodoxy a brief for replacing mainstream economics with a radical political economics and an argument for the abandonment of neoliberal capitalism in favor of democratic socialism It includes a detailed proposal for a demand and cost alternative to supply and demand analysis and an in depth technical critique of both neoclassical high theory and applied microeconomic analysis demonstrating that these are not only infeasible or immoral but have directly contributed to public policy disasters Further the book suggests that only a moral economics in the form of radical political economy can address the looming economic and environmental crises of today's world Baiman begins with an introduction to morality and ethics in both general sciences and in economics in particular He then guides readers through evidence of how neoclassical economics has not only failed to remain objective and value free but has become an ideology of apologetics protecting an immoral system In addition to breaking down real world examples to demonstrate his assertions Baiman analyzes a theoretical Utopia design exercise He concludes by arguing that the only form of economics that supports widely shared human values such as

social equity democracy and solidarity is so called radical economics and that all true economics science should be directed toward achieving more socially productive economic activity An invaluable guide to morality and economics this book will appeal to researchers and teachers looking to change the way we think about economics policy and society Solar Cells Ahmed Mourtada Elseman,2021-09-22 Solar cell energy is the single most pressing issue facing humanity with a more technologically advanced society requiring better energy resources This book discusses technologies broadly depending on how they capture and distribute solar energy or convert it into solar power The major areas covered in this book are The theory of solar cells which explains the conversion of light energy in photons into electric current The theoretical studies are practical because they predict the fundamental limits of a solar cell The design and development of thin film technology based solar cells State of the art for bulk material applied for solar cells based on crystalline silicon c Si also known as solar grade silicon and emerging photovoltaics *Biomedical Visualisation* Leonard Shapiro,Paul M. Rea,2022-09-15 This image rich book explores the practice as well as the theory of visual representation and presents us with the importance of designing appropriate images for communication to specific target audiences This includes the appropriate choice of high tech digital or low tech analogue technologies in image making for communication within the medical education biological research and community health contexts We hear from medical students about the value of using clay modelling in their understanding of anatomy from educators and curriculum designers about visual affordances in medical education and from a community driven project in South Africa about their innovative use of locally designed images and culture specific narratives for communicating important health information to marginalised communities A chapter explores the evolution of scientific visualisation and representation of big data to a variety of audiences and another presents the innovative 3D construction of internal cellular structures from microscopic 2D slices As we embrace blended learning in anatomy education a timely chapter prompts us to think further about and contribute to the ongoing discourse around important ethical considerations in the use and sharing of digital images of body donors This book will appeal to educators medical illustrators curriculum designers post graduate students community health practitioners and biomedical researchers **Becoming Mobius** Dr Debra Kidd,2015-06-10 *Becoming Mobius* is about living with uncertainty Uncertainty is a state of being that many people struggle with both in day to day life and in education being uncertain has almost become a sin If we are truly to have an education system that works we need to accept that learning and life are not simple and we need to engage with difficult and complex ideas Focusing on the process of learning and teaching Dr Debra Kidd posits the possibility that wondering and wandering teachers might impact greatly on a child s ability to live with and thrive among uncertainties She asks of us not only as teachers or researchers but simply as human beings what are the things that affect us and how can we remain attuned to all their possibilities while still functioning Taking cues from neuroscience physi anthropology and philosophy particularly that of Gilles Deleuze and Felix Guattari but also Hannah Arendt Jacques Derrida Michel Foucault

and others Dr Kidd explores the nature and purpose of education through a series of different lenses Details moments interactions and relationships are put under the microscope and their effects on teaching and learning examined Becoming Mobius started life as Debra Kidd s doctoral thesis and draws on her extensive classroom experience her own observations and research and a broad base of educational thought including the work of Gert Biesta Masny s Multiple Literacies and more In Becoming Mobius each chapter is presented as a plateau and maps the complexities of teaching and learning This is a journey through a landscape of education It is not a straight route It is not a cop out It is a means of living in with and through complexity and multiplicity It is an attempt to bring forward a fresh vision of education This is an honest challenging and incredibly profound book that makes you stop and think deeply about what you do why you do it and the effect it has You will never look at teaching in the same light again For anyone interested in thinking deeply about education **Machine Learning, Image Processing, Network Security and Data Sciences** Arup Bhattacharjee, Samir Kr.
