notion of maps as purely objective tools It emphasizes that maps are subjective constructions that reflect their creators biases and historical contexts Maps Lost progresses through a series of compelling case studies examining specific maps and their unintended consequences These include instances where miscalculations led to the search for the Northwest Passage and politicized mappings of contested territories Ultimately Maps Lost argues that cartographic errors while often viewed as failures have paradoxically driven exploration discovery and the expansion of geographic knowledge It equips readers with the tools for cartographic literacy encouraging them to critically analyze maps and understand their role in shaping our perception of the world The Routledge Handbook of Mapping and Cartography Alexander Kent, Peter
