

**BP 1 - ROOF**

The Lotus Elise has been designed to exploit the pleasures of open top motoring, the better to enjoy exposure to the natural environment, unencumbered by the restrictions and confinement bestowed by a cockpit roof. In order to provide some weather protection to the occupants and vehicle interior, and allow the continued enjoyment of the car in unfavourable weather conditions, two roof configurations are provided; a soft top canopy, and a hard roof option comprising a pair of 'Targa' panels supported from a central spar.

Soft Top Canopy

The soft top roof is used in conjunction with a body colour composite panel (rear window shroud) fixed over the roll over bar and extending for a short distance over each rear clamshell buttresses. The rear window shroud incorporates on its underside, a roof tensioning push rod mechanism. A hollow composite roof siderail is used to bridge each top corner of the windscreen frame to the roll over bar, and provide a mounting for a weatherstrip seal, against which the top edge of the door glass abuts. The soft top roof canopy is fixed to each siderail, with each siderail using a spigot pin at the front and rear to engage with a slot in a latch plate on the header rail and roll over bar. A second, spring loaded spigot pin at each end of the siderails, is arranged to slide into a ramped hole on the latch plates to secure and tension the soft top.

Soft Top - Fitting

1. From its stowage bag in the rear luggage compartment, withdraw the roof assembly and support stays. Lower both door windows, or open both doors.
2. Insert the two support stays, with the cranked ends foremost, into the roof slots above the rear window, and in the windscreen header rail.

3. Lay the soft top roof onto the support diaphragm, and unroll the canopy with the tails towards the rear, taking care not to damage the paintwork with the tail spigots.
4. Taking one of the roof side rails, engage the spigot pin on the front and rear end of the rail, into the uppermost slot in the latch block on the windscreen header rail and roll over bar. On the inside face of the side rail, locate the two latch release levers, and pull the handles towards each other whilst rotating the side rail downwards, until both spring loaded pins 'click' into their ramped slots indicating that latching is complete. Pull up on the side rail to check security.
5. Repeat this operation for the opposite side rail ensuring that the tensioning cable at the front edge of the canopy is located in the channel ahead of the windscreen header seal, and that the seal is not pinched by the cable.
Note that the front and rear ends of the spring loaded pins are fitted with plastic end caps to reduce friction. These are glued in position using Loctite 480 after priming with Loctite 770.
