Industrial Parsing of Software Manuals Richard F.E. Sutcliffe,2023-11-27 The task of language engineering is to develop the technology for building computer systems which can perform useful linguistic tasks such as machine assisted translation text retrieval message classification and document summarisation Such systems often require the use of a parser which can extract specific types of grammatical data from pre defined classes of input text There are many parsers already available for use in language engineering systems However many different linguistic formalisms and parsing algorithms are employed Grammatical coverage varies as does the nature of the syntactic information extracted Direct comparison between systems is difficult because each is likely to have been evaluated using different test criteria In this volume eight different parsers are applied to the same task that of analysing a set of sentences derived from software instruction manuals Each parser is presented in a separate chapter Evaluation of performance is carried out using a standard set of criteria with the results being presented in a set of tables which have the same format for each system Three additional chapters provide further analysis of the results as well as discussing possible approaches to the standardisation of parse tree data Five parse trees are provided for each system in an appendix allowing further direct comparison between systems by the reader The book will be of interest to students researchers and practitioners in the areas of computational linguistics computer science information retrieval language engineering linguistics and machine assisted translation

Buddhism in the Sung Daniel A. Getz,Peter N. Gregory,2002-10-31 New paperback edition The Sung Dynasty 960 1279 has long been recognized as a major watershed in

Chinese history Although there are recent major monographs on Sung society government literature Confucian thought and popular religion the contribution of Buddhism to Sung social and cultural life has been all but ignored Indeed the study of Buddhism during the Sung has lagged behind that of other periods of Chinese history One reason for the neglect of this important aspect of Sung society is undoubtedly the tenacity of the view that the Sung marked the beginning of an inexorable decline of Buddhism in China that extended down through the remainder of the imperial era As this book attests however new research suggests that far from signaling a decline the Sung was a period of great efflorescence in Buddhism This volume is the first extended scholarly treatment of Buddhism in the Sung to be published in a Western language It focuses largely on elite figures elite traditions and interactions among Buddhists and literati although some of the book's essays touch on ways in which elite traditions both responded to and helped shape more popular forms of lay practice and piety All of the chapters in one way or another deal with the two most important elite traditions within Sung Buddhism Ch'an and T'ien-t'ai Whereas most previous discussions of Buddhism in the Sung have tended to concentrate on Ch'an the present volume is notable for giving T'ien-t'ai its due By presenting a broader and more contextualized picture of these two traditions as they developed in the Sung this work amply reveals the vitality of Buddhism in the Sung as well as its embeddedness in the social and intellectual life of the time
