Architecture and Fire Stamatis Zografos, 2019-06-12 Architecture and Fire develops a conceptual reassessment of architectural conservation through the study of the intimate relationship between architecture and fire. Stamatis Zografos expands on the general agreement among many theorists that the primitive hut was erected around fire, locating fire as the first memory of architecture at the very beginning of architectural evolution. Following the introduction, Zografos analyses the archive and the renewed interest in the study of archives through the psychoanalysis of Jacques Derrida. He moves on to explore the ambivalent nature of fire, employing the conflicting philosophies of Gaston Bachelard and Henri Bergson to do so before discussing architectural conservation and the relationship between listed buildings, the function of archives and the preservation of memories from the past. The following chapter investigates how architecture evolves by absorbing and accommodating fire, while the penultimate chapter examines the critical moment of architectural evolution: the destruction of buildings by fire, with a focus on the tragic disaster at London's Grenfell Tower in 2017. Zografos concludes with thoughts on Freud's drive theory. He argues the practice of architectural conservation is an expression of the life drive and a simultaneous repression of the death drive, which suggests controlled destruction should be an integral part of the conservation agenda. *Architecture and Fire* is founded in new interdisciplinary research, navigating across the boundaries of architecture, conservation, archival theory, classical mythology, evolutionary theory, thermodynamics, philosophy and psychoanalysis. It will be of interest to readers working in and around these disciplines.

Lees' Loss Prevention in the Process Industries Frank Lees, 2012-11-05 Safety in the process industries is critical for those who work with chemicals and hazardous substances or processes. The field of loss prevention is and continues to be of supreme importance to countless companies, municipalities and governments around the world, and Lees is a detailed reference to defending against hazards. Recognized as the standard work for chemical and process engineering safety professionals, it provides the most complete collection of information on the theory, practice, design elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books and cross-referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers and managers can be found in this all-encompassing three-volume reference. Instead, the process safety encyclopedia, trusted worldwide for over 30 years, is now available in print and online to aid searchability and portability. Over 3,600 print pages cover the full scope of process safety and loss prevention, compiling theory, practice, standards, legislation, case studies and lessons learned in one resource, as opposed to multiple sources.
