How to Recognise and Support Mathematical Mastery in Young Children's Play Di Chilvers, 2021-07-12 This book explains how young children develop mathematically in their earliest years and shows the support and teaching needed by adults to accelerate their progress and attainment, helping them master mathematical concepts and skills. The practical guidance has been carefully developed over a number of years and is based on research undertaken with primary schools in Sheffield as part of the Talk for Maths Mastery initiative. It recognises that children's mathematical development is embedded within child-led play and connected to deeper levels of thinking and wider dispositions for learning. Maths is happening everywhere at any moment; we just need to keep an open mind, open eyes and listen. Including case studies, links to practice and reflective questions, the chapters reveal what mastery orientation looks like from the children's perspective in their learning and covers children's serve and return conversational talk, mathematical babies and their developmental momentum, schematic patterns of thinking, mathematical mark-making, child-led play, problem-solving, creative and critical thinking, how adults can support children's mathematical talk, thinking and mastery. This book will help all early years practitioners and teachers working with children throughout the EYFS and KS1 build their understanding, knowledge, experience and confidence of engaging in early mathematics.

Understanding Assessment David Lambert, David Lines, 2013-04-15 This is the first title in this new series which is aimed principally at secondary PGCE and BAEd students and school and HEI-based tutors. Each book provides a digest of the central issues around a particular topic or issues grounded in or supported by examples of good practice with suggestions for further reading, study and investigation. The books are not intended as how-to books but rather as books which will help students and teachers to explore and understand critical theoretical issues in ways that are challenging, that invite critical reappraisals of taken-for-granted practices and perceptions and that provide appropriate links between theory and practice. Issues related to equal opportunities and special needs are included in each separate volume. There are boxes of questions, think abouts, further reading and bulleted summary lists for the reader. This book is written specifically for teachers in training which will clarify the big picture of monitoring and assessment and makes the crucial distinctions in this large and still taken-for-granted field.

The authors have written widely on assessment matters and have also worked in various capacities for the QCA and its former manifestations. They are also engaged in initial teacher education and so know the level and market extremely well.

Numerical Simulation, An Art of Prediction 1 Jean-François Sigrist, 2019-12-18 Numerical simulation is a technique of major importance in various technical and scientific fields. Used to understand diverse physical phenomena or to design everyday objects, it plays a major role in innovation in the industrial sector. Whilst engineering curricula now include training courses dedicated to it, numerical simulation is still not well known in some economic sectors and even less so among the general public. Simulation involves the mathematical modeling of the real world coupled with the computing power offered by modern technology. Designed to perform virtual experiments, digital simulation can be considered as an art of prediction. Embellished with a rich iconography and based on the testimony of researchers and engineers, this book shines a light on this little-known art. It is the first of two volumes and focuses on the principles, methods, and industrial practice of numerical modeling.
