Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity *Understanding Student Participation and Choice in Science and Technology Education* Ellen Karoline Henriksen, Justin Dillon, Jim Ryder, 2014-09-17 Drawing on data generated by the EU s Interests and Recruitment in Science IRIS project this volume examines the issue of young people s participation in science technology engineering and mathematics education With an especial focus on female participation the chapters offer analysis deploying varied theoretical frameworks including sociology social psychology and gender studies The material also includes reviews of relevant research in science education and summaries of empirical data concerning student choices in STEM disciplines in five European countries Featuring both quantitative and qualitative analyses the book makes a substantial contribution to the developing theoretical agenda in STEM education It augments available empirical data and identifies strategies in policy making that could lead to improved participation and gender balance in STEM disciplines The majority of the chapter authors are IRIS project members with additional chapters written by specially invited contributors The book provides researchers and policy makers alike with a comprehensive and authoritative exploration of the core issues in STEM educational participation Organisational
