Elementary Ninja Luis Estalim Guzman Gonzalez, The Effects of Eastern North Pacific Tropical Cyclones on the Southwestern United States Walter Smith, 1986 **SDGs in the Americas and Caribbean Region** Walter Leal Filho, Noé Aguilar-Rivera, Bruno Borsari, Paulo R. B. de Brito, Baltazar Andrade Guerra, 2023-08-31 This volume provides an overview of the ways sustainable development issues as a whole and the SDGs in particular are perceived and practiced in a variety of countries in the Latin America and Caribbean region. It also discusses the extent to which its many socio-economic problems hinder progress towards the pursuit of a sustainable future and documents successful experiences from across the region. This book is part of the 100 papers to accelerate the implementation of the UN Sustainable Development Goals initiative.

The Oryx Resource Guide to El Niño and La Niña Bloomsbury Publishing, 2002-05-30 Fish die, Seagulls starve, Economies wither. And that's just in the coastal villages. El Niño, The Christ Child, and its climatological opposite La Niña are global events so powerful and strange they virtually have personalities. Many remember the El Niño seasons of 1982-83 and 1997-98 which brought floods, tornadoes, droughts, and snow to unusual locales. Increased study of these Tropical Pacific phenomena also known as ENSO, the El Niño and Southern Oscillation, has now enabled scientists to predict the ENSO state as much as 12 to 18 months in advance and has helped to shape weather prediction in general. Here the basic causes and effects of El Niño and La Niña are carefully chronicled for anyone in search of accurate and current information on these natural phenomena. Chapters are devoted to the history of ENSO, its influence on global weather and on the United States including the ecosystem, and how governments and industries worldwide are utilizing new weather data to harness ENSO's economic impact rather than be saddled by it. A chronology tours key events from the 15th century diary observations of colonists in Ecuador and Peru to recent events like the devastating El Niño of 1997-98 which was responsible for 23,000 deaths and \$33 billion in damages. Biographies of important researchers, illustrations, and maps, and an extensive bibliography help make this a total guide to these magnificent natural cycles.

Managing Uncertainty in Crisis Xiaoli Lu, 2017-11-07 This book studies the variety of organizational strategies selected to cope with critical uncertainties during crises. This research formulates and applies an institutional sense-making model to explain the selection of strategies for coping with uncertainties during crises to answer the question why some organizations select a rule-based strategy to cope with uncertainties whereas others pursue a more ad hoc based strategy. It finds that the level of institutionalization does not affect strategy selection in the initial phase of responding to crises; that three rigidity effects can be identified in the selection of sense-making strategies once organizations have faced the failure of their selected strategies; that discontinuities in the feedback loop of sense-making do not necessarily move organizations to switch their sense-making strategies but interact with institutionalization to contribute to switching sense-making strategies. This book bridges the gap between institutional thinking and crisis management theorizing. A major step forward in the world of crisis management studies. Professor Arjen Boon, Leiden.

Recent Hurricane Research Anthony Lupo, 2011-04-19 This book represents recent research on tropical cyclones and their impact and a wide range of topics are covered An updated global climatology is presented including the global occurrence of tropical cyclones and the terrestrial factors that may contribute to the variability and long term trends in their occurrence Research also examines long term trends in tropical cyclone occurrences and intensity as related to solar activity while other research discusses the impact climate change may have on these storms The dynamics and structure of tropical cyclones are studied with traditional diagnostics employed to examine these as well as more modern approaches in examining their thermodynamics The book aptly demonstrates how new research into short range forecasting of tropical cyclone tracks and intensities using satellite information has led to significant improvements In looking at societal and ecological risks and damage assessment authors investigate the use of technology for anticipating and later evaluating the amount of damage that is done to human society watersheds and forests by land falling storms The economic and ecological vulnerability of coastal regions are also studied and are supported by case studies which examine the potential hazards related to the evacuation of populated areas including medical facilities These studies provide decision makers with a potential basis for developing improved evacuation techniques

Powerless Diana Hernández, Jennifer Laird, 2025-04-08 Energy serves as the lifeblood of our daily experiences It permeates virtually every aspect of our existence facilitating nourishment safety and productivity When affordability threatens energy's availability a family's living situation can become untenable too cold too hot too dark and too often unhealthy and unsafe In *Powerless* sociologists Diana Hernández and Jennifer Laird reveal the hidden hardship of energy insecurity the inability to adequately meet household energy needs Approximately one in ten households in the U S are energy insecure and four in ten are at risk for energy insecurity These statistics alone do not convey the acute pain of utility shutoffs or the relentless toll of chronic energy hardships marked by difficult choices and harsh living conditions Drawing on

survey data and interviews with one hundred energy insecure individuals and families Hernandez and Laird detail the experience of energy insecurity Individuals and families suffering from energy insecurity endure economic hardships such as difficulty paying utility bills utility debt and disconnection from utility services They also struggle with physical challenges such as poor housing conditions and poor or dysfunctional heating and cooling systems They are often forced to make difficult choices about what bills to pay These decisions are sometimes referred to as heat or eat choices as families cannot afford to pay for heating and food at the same time Energy insecure individuals and families employ a variety of strategies to keep energy costs down to avoid having to make these hard choices This includes deliberate underconsumption of energy enduring physical discomfort and using dangerous alternatives such as open flames ovens or space heaters to try to maintain a comfortable temperature in their home To be energy insecure is to suffer Despite the heavy toll of energy insecurity most people confront these difficulties behind closed doors believing it is a private matter Thus the enormous social crisis of energy insecurity goes unnoticed Hernandez and Laird argue that household energy is a basic human right and detail policies and practices that would expand access to consistent safe clean and affordable energy Their proposals include improving the current energy safety net which is limited and often does not serve the most energy insecure due to stringent program requirements and administrative burdens They also suggest redesigning rates to accommodate income promoting enrollment and expansion of discount programs reforming utility disconnection policies improving energy literacy and ensuring an equitable shift to renewable energy resources Powerless creates a comprehensive picture of the complex social and environmental issue of energy insecurity and shows how energy equity is not just an aspiration but an achievable reality

Sea of Storms Stuart B. Schwartz, 2016-07-26 A panoramic social history of hurricanes in the Caribbean The diverse cultures of the Caribbean have been shaped as much by hurricanes as they have by diplomacy commerce or the legacy of colonial rule In this panoramic work of social history Stuart Schwartz examines how Caribbean societies have responded to the dangers of hurricanes and how these destructive storms have influenced the region s history from the rise of plantations to slavery and its abolition to migrations racial conflict and war Taking readers from the voyages of Columbus to the devastation of Hurricane Katrina Schwartz looks at the ethical political and economic challenges that hurricanes posed to the Caribbean s indigenous populations and the different European peoples who ventured to the New World to exploit its riches He describes how the United States provided the model for responding to environmental threats when it emerged as a major power and began to exert its influence over the Caribbean in the nineteenth century and how the region s governments came to assume greater responsibilities for prevention and relief efforts that by the end of the twentieth century were being questioned by free market neoliberals Schwartz sheds light on catastrophes like Katrina by framing them within a long and contentious history of human interaction with the natural world Spanning more than five centuries and drawing on extensive archival research in Europe and the Americas Sea of Storms emphasizes the continuing role of race social inequality and economic ideology in the shaping of our responses to natural disaster

Climate Change, Public Health, and the Law Michael Burger, Justin Gundlach, 2018-10-25 Climate Change Public Health and the Law provides the first comprehensive explication of the dynamic interactions between climate change public health law and environmental

law both in the United States and internationally Responding to climate change and achieving public health protections each require the coordination of the decisions and behavior of large numbers of people However they also involve interventions that risk compromising individual rights The challenges involved in coordinating large scale responses to public health threats and protecting against the invasion of rights makes the law indispensable to both of these agendas Written for the benefit of public health and environmental law professionals and policymakers in the United States and in the international public health sector this volume focuses on the legal components of pursuing public health goals in the midst of a changing climate It will help facilitate efforts to develop improve and carry out policy responses at the international federal state and local levels

Energy Production in the Mississippi River Delta J. W. Day,R. G. Hunter,H. C. Clark,2022-04-12 For nearly a century the energy industry had a profound impact on the Mississippi Delta including both the natural and socio economic systems The purpose of this book is to describe the delta how oil and gas O G activities have impacted both natural and socio economic systems and how much of the degradation could have been avoided The Mississippi Delta formed over the past six thousand years but in less than a century lost 25 percent of coastal wetlands O G activities contributed significantly to this loss O G production began in the early 20th century and over 600 conventional fields were developed Production ramped up rapidly peaking around 1970 then declined As O G production declines produced water dominates fluid production and this high salinity brine is laced with a variety of toxins Often O G was produced rapidly and much was left in the ground and is now technically and economically unavailable With careful planning this situation could have been avoided The industry also affected the regulatory framework by weakening regulations enforcement and impacts were not adequately addressed and more profits flowed out of state Thus the state was economically and environmentally worse off The industry should be compelled to contribute expertise and financial resources to restoration of the delta
