The Impact Factor of Scientific and Scholarly Journals Tibor Braun, 2007 The Sage Encyclopedia of Qualitative Research Methods: A-L ; Vol. 2, M-Z Index Lisa M. Given, 2008-08-21 An encyclopedia about various methods of qualitative research What Every Medical Writer Needs to Know Robert B. Taylor, 2015-08-29 This book presents must know facts generally not covered in How To books about medical writing Every medical writer whether a beginner or veteran needs answers to questions many might not even know to ask How does your personality type influence your writing behavior and what can you do to make writing easier for you What should you ask before agreeing to co author an article for publication or write a book chapter What are some of the current issues regarding copyright and plagiarism that authors may face What has research discovered about the quotations and references found in journal articles What do you need to know about open access journals and predatory publishers Dr Taylor tells some surprising truths about medical publishing including possible sources of peer review bias and some alarming influences on what ends up in print He also relates little known stories about renowned medical writers such as Sir William Osler William Carlos Williams and Elisabeth K bler Ross and the origins of some of medicine s classic publications What Every Medical Writer Needs to Know provides information vital for every health care professional who aspires to write for others to read academicians and practicing physicians nurses nurse practitioners and physician assistants and professional medical and scientific writers *Activity report* Brookhaven National Laboratory. National Synchrotron Light Source, 2005 **Journal of the National Cancer Institute** , 2001-11 **The ABCs of ERM** Jessica Zellers, Tina M. Adams, Katherine Hill, 2018-01-22 The ever shifting landscape of electronic resources challenges even the most tech savvy information professionals Now however you can surmount those challenges with the solid backing offered in this practical book Despite their being visible valuable and expensive components of public and academic library collections electronic resources remain somewhat mysterious to many librarians How do you deal with vendors how do you decide which e resources to buy how do you optimize access for remote users and perhaps most importantly how do you motivate your public to use them Created by three front line practitioners this guide answers all of those questions and more offering practical advice to information professionals involved in any aspect of electronic resource management from selecting acquiring and activating to managing promoting and deselecting It features clear instructions along with definitions checklists FAQs and sidebars comprising sensible tips and anecdotal asides for the involved librarian Written in a lively style and brimming with helpful information this is the guide you ll wish you had in library school and a resource you will refer to again and again The Death of Science Andrew Holster, 2016-07-26 Modern science is in unprecedented crisis It is a crisis at many levels continuous with larger crises of modern society It is a crisis for the vocation of the scientist working within the modern institutionalised structures of science It is a crisis for our capacity to use science benevolently to help solve larger material organisational and ultimately political problems of the modern era And it is a crisis for philosophy for the role of

natural science to help inform our world view The Death of Science is an account of deeper causes of this malaise It starts by taking up the reins of L pez Corredoira s 2013 The Twilight of the Scientific Age a recent critique that concludes with modern science on its death bed It dissects key themes in detail illustrated in the same frank style drawing on personal examples It starts with deep issues in the philosophy of science recounting failed modern concepts of scientific progress method and truth going on to failures of peer review and gate keeping as quality control systems the domination of propaganda and marketing channels as the critical tools for professional success and the major outcome for creative scientists themselves the destruction of scientific creativity and exclusion of heterodox thinkers in this degraded environment It connects the behavioural symptoms with a psycho social analysis of the bureaucratic mode of organisation under which science like all other modern vocations is now subsumed The account supports L pez Corredoira s appraisal which sees a modern science industry driven by greed and ambition repressing imagination and freedom destructive of novelty and diversity of ideas controlled by bureaucratic academic power hierarchies While science is irrevocably corrupted by its modern mass institutionalisation the true spirit of science can only be sustained by individuals with a real vocation as scientists or natural philosophers who seek understanding and meaning and wisdom rather than technocratic specialisation and careers But it is increasingly impossible for scientists to withstand forces of professional conformity and maintain their personal sense of value A number of current controversies in some core sciences are also discussed and it is argued that the greatest revelations of real science are yet to come While Establishment Science has locked itself into dogmatic paradigms the failures of present theories show that we are really on the cusp of major revolutions spanning sciences of physics and cosmology information and intelligence biology and evolution and mind and consciousness If these are realised they will profoundly change our understanding of the nature of the world and ourselves But any such revolutions challenge a Science Establishment locked into the self interest of its power brokers and are unlikely to occur except through independent scientists working outside the institutional system The book concludes with a brief discussion of the place of independent scientists

Bioinformatics Programming in Python Ruediger-Marcus Flaig,2011-10-05 This first introductory book designed to train novice programmers is based on a student course taught by the author and has been optimized for biology students without previous experience in programming By interspersing theory chapters with numerous small and large programming exercises the author quickly shows readers how to do their own programming and throughout uses anecdotes and real life examples from the biosciences to spice up the text This practical book thus teaches essential programming skills for life scientists who want or need to write their own bioinformatics software tools
