Holdgate, Antonia Turberville, Alice Lanne, 2024-03-05 LABORATORY GUIDE TO ENZYMOLOGY An accessible guide to understanding the foundations of enzymology at its application in drug discovery Enzymes are highly specialized proteins necessary for performing specific biochemical reactions essential for life in all organisms In disease the functioning of these enzymes can become altered and therefore enzymes represent a large class of key targets for drug discovery In order to successfully target dysfunctional enzymes pharmaceutically the unique mechanism of each enzyme must be understood through thorough and in depth kinetic analysis The topic of enzymology can appear challenging due its interdisciplinary nature combining concepts from biology chemistry and mathematics Laboratory Guide to Enzymology brings together the theory of enzymology and associated lab based work to offer a practical accessible guide encompassing all three scientific disciplines Beginning with a brief introduction to proteins and enzymes the book slowly immerses the reader into the foundations of enzymology and how it can be used in drug discovery using modern methods of experimentation The result is a detailed but highly readable volume detailing the basis of drug discovery research Laboratory Guide to Enzymology readers will also find Descriptions of key concepts in enzymology Examples of drugs targeting different enzymes via different mechanisms Detailed discussion about many areas of enzymology such as binding and steady state kinetics assay development and enzyme inhibition and activation Laboratory Guide to Enzymology is ideal for all pharmaceutical and biomedical researchers working in enzymology and assay development as well as advanced students in the biochemical or biomedical sciences looking to develop a working knowledge of this field of research *The Six-Inch Lunar Atlas* Don Spain, 2009-10-03 Here is a lunar atlas designed specifically for use in the field by lunar observers Its title The Six inch Lunar Atlas refers both to the aperture of the telescope used to make the images in the book and also to the book s physical size so it s perfect for fitting into an observer s pocket The author s own lunar photographs were taken with a 6 inch 150mm telescope and CCD camera and closely match the visual appearance of the Moon when viewed through a modest 3 inch to 8 inch telescope Depending on seeing of course Each picture is shown oriented as the Moon really is when viewed from the northern hemisphere and is supplemented by exquisite computer sketches that list the main features Two separate computer sketches are provided to go with each photograph one oriented to appear as seen through an SCT telescope e g the Meade and Celestron ranges the other oriented for Newtonian and refracting telescopes It is worth commenting that most observers find it extremely difficult to identify lunar features when using a conventional atlas and SCT telescope the human brain is very poor at making mirror image visual translations There is a page of descriptions for the salient features in each photograph [My Samsung Galaxy S 4](#) Steven A. ***Women Philosophers Volume II* Dorothy G. Rogers, 2021-04-08**

Tackling the intellectual histories of the first twenty women to earn a PhD in philosophy in the United States

this book traces their career development and influence on American intellectual life

The case studies include Eliza Ritchie Marietta Kies Julia Gulliver Anna Alice Cutler Eliza Sunderland and many more

Author Dorothy Rogers looks at the factors that led these women to pursue careers in academic philosophy

examines the ideas they developed and evaluates the impact they had on the academic and social worlds they inhabited

Many of these women were active in professional academic circles published in academic journals and contributed to important philosophical discussions of the day

the question of free will the nature of God in relation to self and how to establish a just society

The most successful women earned their degrees at women friendly institutions yet a handful of them achieved professional distinction at institutions that refused to recognize their achievements at the time

John Hopkins and Harvard are notable examples

The women who did not develop careers in academic philosophy often moved to careers in social welfare or education

Thus whilst looking at the academic success of some this book also examines the policies and practices that made it difficult or impossible for others to succeed
