Manual of Soil Laboratory Testing K. H. Head, 1986

Manual of Soil Laboratory Testing K. H. Head, Roger Epps, 2014

This 3rd volume completes the long established key handbook for the laboratory testing of soils. The text covers soil testing in terms of effective stress for which the measurement of pore water pressure is the essential feature. The principle and theory of effective stress are explained, practical applications are outlined, and the apparatus used, including its calibration and checking, is described. The book has been updated to reflect current practice and instrumentation using electronic data capture. The first two chapters provide the theory. These are followed by a description of the apparatus and associated instrumentation for effective stress triaxial tests, and then the test procedures themselves. A description of the accelerated permeability test and procedures for unconsolidated undrained and consolidated undrained triaxial compression tests using a mid height pore pressure probe have been added, and reference to changes due to Eurocode 7 requirements for sample quality are provided as required.

Characterisation and Engineering Properties of Natural Soils T. S. Tan, 2003. This first volume of a specialty 2 volume work contains 34 papers pertaining to the natural behaviour of diverse geomaterials found in different parts of the world. Each paper is organized along the outline: location and distribution, engineering geology, composition, state and index properties, structure, engineering properties, quality, reliability of data, with reference to methods of sampling and testing, and relation to engineering problems. This extensive body of collated knowledge is integrated by three overview papers covering engineering geology, mechanical behaviour, and engineering implications. Topics: Overview papers, Marine clays, Estuarine clays, Lacustrine clays, Stiff clays, Sands and other cohesionless soils, Residual and other tropical soils, Weak rock.
