Nondestructive Assay of Nuclear Materials for Safeguards and Security William H. Geist, Peter A. Santi, Martyn T. Swinhoe, 2024-10-22 This open access book describes the nondestructive assay techniques that are used for the measurement of nuclear material primarily uranium and plutonium for nuclear material accountancy purposes It is a substantial revision to the so called PANDA manual that has been a standard reference since its publication in 1991 The book covers the origin and interactions of gamma rays and neutrons as they affect nuclear measurements and also describes the theory and practice of calorimetry The book gives a description of many instruments based on these techniques that are applied in the field Although the basic physics has not changed since PANDA was first published the last thirty years have seen many advances in analysis methods instrumentation and applications The basic descriptions of the origin and interactions of radiation have

been updated and include newer references There have been extensive revisions of the description of gamma detection methods attenuation correction procedures and analysis methods including for the measurement of uranium enrichment and the determination of plutonium isotopic composition Extensive revisions and additions have also been made to the description of neutron detectors and to the explanation of neutron coincidence techniques The chapter on neutron multiplicity techniques is a new addition to this edition The applications of gamma and neutron techniques have been completely overhauled to remove obsolete systems and to include many current applications The values of and references to nuclear data have been updated This updated edition is an essential reference for academic researchers and practitioners in the field This is an open access book Spent Nuclear Fuel and Accelerator-Driven Subcritical Systems Vinod Kumar Verma,Karel Katovsky,2018-10-12 This book offers a comprehensive overview of the reprocessing of spent nuclear fuels and discusses the applications of radiation particularly spallation neutrons and gamma rays The unspent nuclear fuel of a reactor amounts to roughly 95 per cent of the loaded fuel It contains both fertile and fissile fuels minor and higher actinides and radioactive fission products In 2015 out of approximately 4 million metric tons of spent fuel only 90 000 metric tons was reprocessed worldwide the rest was either sent to repositories kept for cooling down or put on a waiting list for future reprocessing With regard to the direct reutilization of spent nuclear fuel the new technique of Energy Amplifiers has attracted considerable attention among the nuclear energy community Presenting extensive information on this technique the book is divided into eight major sections i spent nuclear fuel and alternative transmutation methods ii general concept of accelerator driven subcritical systems ADSS iii spallation neutron sources and the possibility of incineration iv requirements for nuclear data v transmutation of spent nuclear fuel and extension of the fuel cycle vi spallation neutron production facilities vii major experimental facilities for ADSS and viii software tools for the design and modelling of ADSS The book is ideally suited as a textbook for graduate students as well as a reference guide for researchers and practitioners **Reactor Dosimetry in the 21st Century** Jan Wagemans,2003 This book presents the state of the art in reactor dosimetry as applied to nuclear power plants and to high performance research reactors accelerator driven systems and spallation sources The reader will also find the latest advances in computer code development for radiation transport and shielding In addition the book focuses on radiation measurement techniques **Monte Carlo Techniques in Radiation Therapy** Frank Verhaegen,Joao Seco,2021-11-29 About ten years after the first edition comes this second edition of Monte Carlo Techniques in Radiation Therapy Introduction Source Modelling and Patient Dose Calculations thoroughly updated and extended with the latest topics edited by Frank Verhaegen and Joao Seco This book aims to provide a brief introduction to the history and basics of Monte Carlo simulation but again has a strong focus on applications in radiotherapy Since the first edition Monte Carlo simulation has found many new applications which are included in detail The applications sections in this book cover the following Modelling transport of photons electrons protons and ions Modelling radiation sources for external beam
