Office of the Assistant Secretary of the Army (Civil Works), 2015 *DiQuMaSPAB* Francesco Tornabene, Nicholas Fantuzzi, Michele Baccocchi, 2018-02-09 The main aim of this book is to show the features of DiQuMASPAB so ware through the description of its graphical interface by giving special emphasis to all those aspects implemented in the code DiQuMASPAB acronym of Differential Quadrature for Mechanics of Anisotropic Shells Plates Arches and Beams is a computational code which can be used for the numerical analysis of doubly curved shells made of innovative materials using the Generalized Differential Quadrature GDQ and the Generalized Integral Quadrature GIQ methods The software can investigate the mechanical behavior of these structures through different approaches and structural theories In particular this code allows considering a kinematic expansion characterized by different degrees of freedom for the Equivalent Single Layer ESL theories and for each layer when the Layer Wise LW approach is taken into account As far as the materials are concerned it is possible to consider different lamination schemes as well as various distributions of the volume fraction of the constituents for those layers that vary their mechanical properties along the thickness In addition the software analyzes structures with variable thickness and characterized by variable mechanical properties that can change point by point A finite element formulation is also available to investigate the mechanical behavior of plane structures characterized by irregular domains and mechanical discontinuities **Anisotropic Doubly-Curved Shells** Francesco Tornabene, Michele Baccocchi, 2019-11-01 This book aims to present in depth several Higher order Shear Deformation Theories HSDTs by means of a unified approach for the mechanical analysis of doubly curved shell structures made of anisotropic and composite materials In particular the strong and weak formulations of the corresponding governing equations are discussed and illustrated The approach presented in this volume is completely general and represents a valid tool to investigate the structural behavior of many arbitrarily shaped structures An isogeometric mapping procedure is also illustrated to this aim Special attention is given also to advanced and innovative constituents such as Carbon Nanotubes CNTs Variable Angle Tow VAT composites and Functionally Graded Materials FGMs In addition several numerical applications are developed to support the theoretical models Accurate efficient and reliable

numerical techniques able to approximate both derivatives and integrals are presented which are respectively the Differential Quadrature DQ and Integral Quadrature IQ methods Finally two numerical techniques named Strong Formulation Finite Element Method SFEM and Weak Formulation Finite Element Method WFEM are developed to deal with multi element domains characterized by arbitrary shapes and discontinuities
