Make America Financially Great Rick Nichols, 2020-11-23
We have many conspiracy theories
This book adds the costliest in money and lives
The conspiracy is to lead professors of finance economics political science and law away from understanding today's money supply system
This is accomplished by not requiring professors to study the 1913 Federal Reserve Act to become professors
This is the act of Congress that established our checking account systems
Professors can't teach what they don't understand and they can't understand what they don't study
What wasn't taught to the author by his professors is the 1913 Federal Reserve Act replaced gold as money with checking account balances as money but it didn't say so directly
The Federal Reserve Act also gave the government's power to control checking account deposits to non government people but it didn't say so directly
It gave the non government people the power to increase a checking account balance without actually depositing money but it didn't say so directly
The non government people are allowed to make a checking deposit without actually depositing money and loan that Money Less Deposit to the US national debt
The non government executives of the Federal Reserve board did say that directly but the professors would have had to also study the 1864 National Currency Act to recognize that the conspiracy is within the reserves of the Federal Reserve but they aren't required to study that act either to become professors
The purpose of this book is to counter the conspiracy by explaining the economic system created by the Federal Reserve Act to citizens and then ask citizens to help the author persuade professors to study the Federal Reserve Act so they can begin teaching us the correct information
That information will lead the U S to financial greatness because right now citizens are conquered by a misunderstood document passed by Congressmen over one hundred years ago

Financial Amplification Mechanisms and the Federal Reserve's Supply of Liquidity During the Crisis Asani Sarkar, 2011
This is a print on demand edition of a hard to find publication
The small decline in the value of mortgage related assets relative to the large total losses assoc with the financial crisis suggests the presence of financial amplification mechanisms FAM which allow relatively small shocks to propagate through the financial system
The Federal Reserve's FR early stage liquidity programs worked to dampen the balance sheet FAM arising from the positive feedback between financial constraints and

asset prices The FR's later stage crisis programs takes into account adverse selection FAM that operate via increases in credit risk and the externality imposed by risky borrowers on safe ones New evidence suggests that increases in the FR's liquidity supply reduce interest rates during periods of high liquidity risk Illus
