

HOT ROD DELUXE INTRODUCTION

Congratulations on your purchase of a Fender Hot Rod Deluxe, the next step in the evolution of Fender American Tube Amplifiers. The Hot Rod Deluxe is a versatile musical instrument that features extensive tone shaping abilities and virtually unlimited gain — defining the next generation of FAT Fender Tone.

The Hot Rod Deluxe is rated at 40W R.M.S. and includes among its many features a unique More Drive function adding yet another sonic option to the HRT's potent arsenal of tones.

NOTE: If you've read this far... don't stop now! Check out the sound settings and experiment with them. Spin the tone controls and see what happens... Patch in the footswitch and give the Reverb a twist... Roll back the drive, crank the master, make those tubes dance ...

So, take the time to get to know each other... Tune-up, Plug-in and Play-on.

NOTES REGARDING BIAS:

Your new Fender amplifier has an internally mounted variable bias control. The bias control is used to set the idle current in your amplifier's output tubes, properly matching the amp's performance characteristics to the types of tubes you intend to use. Each different tube brand and manufacturer may require a slightly different bias setting. If you replace your tubes with the Fender types your amp was originally outfitted with, no bias adjustment is necessary. Having said that, an amp's bias can drift over time in much the same way the ignition settings on your guitar can. Both need to be looked at periodically. The bias setting of a tube-type amplifier is analogous to the idle setting on a car. If it is not set properly, every other aspect of the system suffers. A properly biased amp will sound great and will run reliably and safely.

Also, beware! Internal voltages of tube-type amplifiers are lethal and capacitors are capable of storing these lethal charges. To ensure tone and safety, biasing this amp (and all other amps) should be carried out by qualified personnel only.
