Algebra VII D.J. Collins, R.I. Grigorchuk, P.F. Kurchanov, H. Zieschang, 2013-12-01 From the reviews The book under review consists of two monographs on geometric aspects of group theory Together these two articles form a wide ranging survey of combinatorial group theory with emphasis very much on the geometric roots of the subject This will be a useful reference work for the expert as well as providing an overview of the subject for the outsider or novice Many different topics are described and explored with the main results presented but not proved This allows the interested reader to get the flavour of these topics without becoming bogged down in detail Both articles give comprehensive bibliographies so that it is possible to use this book as the starting point for a more detailed study of a particular topic of interest Bulletin of the London

Mathematical Society 1996 *Purity, Spectra and Localisation* Mike Prest, 2009-06-04 It is possible to associate a topological space to the category of modules over any ring This space the Ziegler spectrum is based on the indecomposable pure injective modules Although the Ziegler spectrum arose within the model theory of modules and plays a central role in that subject this book concentrates specifically on its algebraic aspects and uses The central aim is to understand modules and the categories they form through associated structures and dimensions which reflect the complexity of these and similar categories The structures and dimensions considered arise particularly through the application of model theoretic and functor category ideas and methods Purity and associated notions are central localisation is an ever present theme and various types of spectrum play organising roles This book presents a unified coherent account of material which is often presented from very different viewpoints and clarifies the relationships between these various approaches **Introduction**
