Principles of Arithmetic and Geometry for Elementary School Teachers Carl Barnett Allendoerfer, 1971 **B.H. Blackwell** B.H. Blackwell Ltd, 1928 **An Invitation to Modern Enumerative Geometry** Andrea T. Ricolfi, 2022-12-14

This book is based on a series of lectures given by the author at SISSA Trieste within the PhD courses Techniques in enumerative geometry 2019 and Localisation in enumerative geometry 2021 The goal of this book is to provide a gentle introduction aimed mainly at graduate students to the fast growing subject of enumerative geometry and more specifically counting invariants in algebraic geometry In addition to the more advanced techniques explained and applied in full detail to concrete calculations the book contains the proofs of several background results important for the foundations of the theory In this respect this text is conceived for PhD students or research beginners in the field of enumerative geometry or related areas This book can be read as an introduction to Hilbert schemes and Quot schemes on 3 folds but also as an introduction to localisation formulae in enumerative geometry It is meant to be accessible without a strong background in algebraic geometry however three appendices one on deformation theory one on intersection theory one on virtual fundamental classes are meant to help the reader dive deeper into the main material of the book and to make the text itself as self contained as possible **Geometry Activities from Many Cultures** Beatrice Lumpkin, 1997 Heighten student awareness in the application of geometry from different cultures Topics covered range from the beginning of geometry to its use in modern times

2D Electrostatic Fields Robert L. Coffie, 2021-09-16 This book demonstrates how to use functions of a complex variable to solve engineering problems that obey the 2D Laplace equation and in some cases the 2D Poisson equation The book was written with the engineer physicist in mind and the majority of the book focuses on electrostatics A key benefit of the complex variable approach to electrostatics is the visualization of field lines through the use of field maps With today's powerful computers and mathematical software programs field maps are easily generated once the complex potential has been determined Additionally problems that would have been considered out of scope previously are now easily solved with these mathematical software programs For example solutions requiring the use of non elementary functions such as elliptic and hypergeometric functions would have been viewed as not practical in the past due to the tedious use of look up tables for evaluation Now elliptic and hypergeometric functions are built in functions for most mathematical software programs making their evaluation as easy as a trigonometric function Key highlights in the book include 2D electrostatics completely formulated in terms of complex variables More than 60 electrostatic field maps Comprehensive treatment for obtaining Green's functions with conformal mapping Fully worked Schwarz Christoffel transformations to more than usual number of problems A full chapter devoted to solving practical problems at an advanced level Detailed solutions to all end of chapter problems available on book's website Although the text is primarily self contained the reader is assumed to have taken differential and integral calculus and introductory courses in complex variables and electromagnetics **Space and Time**

Richard Swinburne,1968-06-18 **Geometric and Ergodic Aspects of Group Actions** S. G. Dani,Anish Ghosh,2020-01-13

This book gathers papers on recent advances in the ergodic theory of group actions on homogeneous spaces and on geometrically finite hyperbolic manifolds presented at the workshop Geometric and Ergodic Aspects of Group Actions organized by the Tata Institute of Fundamental Research Mumbai India in 2018 Written by eminent scientists and providing clear detailed accounts of various topics at the interface of ergodic theory the theory of homogeneous dynamics and the geometry of hyperbolic surfaces the book is a valuable resource for researchers and advanced graduate students in mathematics
