Information Theory And Coding Lab Manual:

A Student's Guide to Coding and Information Theory Stefan M. Moser, Po-Ning Chen, 2012-01-26 This easy to read guide provides a concise introduction to the engineering background of modern communication systems from mobile phones to data compression and storage Background mathematics and specific engineering techniques are kept to a minimum so that only a basic knowledge of high school mathematics is needed to understand the material covered The authors begin with many practical applications in coding including the repetition code the Hamming code and the Huffman code They then explain the corresponding information theory from entropy and mutual information to channel capacity and the information transmission theorem Finally they provide insights into the connections between coding theory and other fields Many worked examples are given throughout the book using practical applications to illustrate theoretical definitions Exercises are also included enabling readers to double check what they have learned and gain glimpses into more advanced topics making this perfect for anyone who needs a quick introduction to the subject

Providing in depth treatment of error correction Error Correction Coding Mathematical Methods and Algorithms 2nd Edition provides a comprehensive introduction to classical and modern methods of error correction The presentation provides a clear practical introduction to using a lab oriented approach Readers are encouraged to implement the encoding and decoding algorithms with explicit algorithm statements and the mathematics used in error correction balanced with an algorithmic development on how to actually do the encoding and decoding Both block and stream convolutional codes are discussed and the mathematics required to understand them are introduced on a just in time basis as the reader progresses through the book The second edition increases the impact and reach of the book updating it to discuss recent important technological advances New material includes Extensive coverage of LDPC codes including a variety of decoding algorithms A comprehensive introduction to polar codes including systematic encoding decoding and list decoding An introduction to fountain codes Modern applications to systems such as HDTV DVBT2 and cell phones Error Correction Coding includes extensive program files for example C code for all LDPC decoders and polar code decoders laboratory materials for students to implement algorithms and an updated solutions manual all of which are perfect to help the reader understand and retain the content The book covers classical BCH Reed Solomon Golay Reed Muller Hamming and convolutional codes which are still component codes in virtually every modern communication system There are also fulsome discussions of recently developed polar codes and fountain codes that serve to educate the reader on the newest developments in error correction
