Intelligent Systems From Theory To Practice Studies In Computational Intelligence:

Tree-Structure based Hybrid Computational Intelligence Yuehui Chen, Ajith Abraham, 2009-11-27 Research in computational intelligence is directed toward building thinking machines and improving our understanding of intelligence. As evident, the ultimate achievement in this field would be to mimic or exceed human cognitive capabilities including reasoning, recognition, creativity, emotions, understanding, learning, and so on. In this book, the authors illustrate a hybrid computational intelligence framework and its applications for various problem solving tasks. Based on tree structure based encoding and the specific function operators, the models can be flexibly constructed and evolved by using simple computational intelligence techniques. The main idea behind this model is the flexible neural tree, which is very adaptive, accurate, and efficient. Based on the pre-defined instruction operator sets, a flexible neural tree model can be created and evolved. This volume comprises of 6 chapters, including an introductory chapter giving the fundamental definitions and the last Chapter provides some important research challenges. Academics, scientists, as well as engineers engaged in research, development, and application of computational intelligence techniques and data mining will find the comprehensive coverage of this book invaluable.

Computational Intelligence in Theory and Practice Bernd Reusch, Karl-Heinz Temme, 2013-03-20 Computational Intelligence, with its roots in Fuzzy Logic, Neural Networks, and Evolutionary Algorithms, has become an important research and application field in computer science in the last decade. Methodologies from these areas and combinations of them enable users from engineering, business, medicine, and many more branches to capture and process vague, incomplete, uncertain, and imprecise data and knowledge. Many algorithms and tools have been developed to solve problems in the realms of high and low level control, information processing, diagnostics, decision support, classification, optimisation, and many more. This book tries to show the impact and feedback between theory and applications of Computational Intelligence, highlighted on selected examples.

Computational Intelligence in Power Engineering Ajith Abraham, Swagatam Das, 2010-09-08 Computational Intelligence (CI) is one of the most important, powerful tools for research in the diverse fields of engineering sciences, ranging from traditional fields of civil, mechanical engineering to vast sections of electrical, electronics, and computer engineering, and above all, the biological and pharmaceutical sciences. The existing field has its origin in the functioning of the human brain in processing information, recognizing pattern, learning from observations and experiments, storing and retrieving information from memory, etc. In particular, the power industry, being on the verge of epoch changing due to deregulation, the power engineers require Computational intelligence tools for proper planning, operation, and control of the power system. Most of the CI tools are suitably formulated as some sort of optimization or decision making problems. These CI techniques provide the power utilities with innovative solutions for efficient analysis, optimal operation, and control, and intelligent decision making. This edited volume deals with different CI techniques for solving real world Power Industry problems. The technical contents will be extremely helpful for the researchers as well as the practicing engineers in the
