Pacheco-Torgal, Joao Labrincha, Luisa F. Cabeza, Claes-Göran Granqvist, 2015-02-27 Climate change is one of the most important environmental problems faced by Planet Earth The majority of CO2 emissions come from burning fossil fuels for energy production and improvements in energy efficiency shows the greatest potential for any single strategy to abate global greenhouse gas GHG emissions from the energy sector Energy related emissions account for almost 80% of the EU s total greenhouse gas emissions The building sector is the largest energy user responsible for about 40% of the EU s total final energy consumption In Europe the number of installed air conditioning systems has increased 500% over the last 20 years but in that same period energy cooling needs have increased more than 20 times The increase in energy cooling needs relates to the current higher living and working standards In urban environments with low outdoor air quality the general case this means that in summer time one cannot count on natural ventilation to reduce cooling needs Do not forget the synergistic effect between heat waves and air pollution which means that outdoor air quality is worse in the summer

aggravating cooling needs Over the next few years this phenomenon will become much worse because more people will live in cities more than 2 billion by 2050 and global warming will aggravate cooling needs An overview of materials to lessen the impact of urban heat islands Excellent coverage of building materials to reduce air conditioning needs Innovative products discussed such as Thermo and Electrochromic materials *Comprehensive Water Quality and Purification*, 2013-09-24 Comprehensive Water Quality and Purification Four Volume Set provides a rich source of methods for analyzing water to assure its safety from natural and deliberate contaminants including those that are added because of carelessness of human endeavors Human development has great impact on water quality and new contaminants are emerging every day The issues of sampling for water analysis regulatory considerations and forensics in water quality and purity investigations are covered in detail Microbial as well as chemical contaminations from inorganic compounds radionuclides volatile and semivolatile compounds disinfectants herbicides and pharmaceuticals including endocrine disruptors are treated extensively Researchers must be aware of all sources of contamination and know how to prescribe techniques for removing them from our water supply Unlike other works published to date that concentrate on issues of water supply water resource management hydrology and water use by industry this work is more tightly focused on the monitoring and improvement of the quality of existing water supplies and the recovery of wastewater via new and standard separation techniques Using analytical chemistry methods offers remediation advice on pollutants and contaminants in addition to providing the critical identification perspective The players in the global boom of water purification are numerous and varied Having worked extensively in academia and industry the Editor in Chief has been careful about constructing a work for a shared audience and cause *Reality Television* Alison F.
